STAFF REPORT: CONSENT CALENDAR

Application No.: 6-01-73

Applicant: City of San Diego

Agent: Joselito Guinto

Description: Construction of an underground emergency storage tank located on the northeast side of an existing pump station and installation of a new 8-inch force main for approximately 1900 lineal feet from the pump station through existing public parkland and terminating at an existing interceptor within North Mission Bay Drive.

Site: De Anza Road, Mission Bay Park, San Diego, San Diego County. Apm
424-460-06

Substantive File Documents: Certified Mission Bay Park Master Plan

I. STAFF RECOMMENDATION:

The staff recommends the Commission adopt the following resolution:

MOTION: *I move that the Commission approve the coastal development permit applications included on the consent calendar in accordance with the staff recommendations.*

STAFF RECOMMENDATION TO ADOPT CONSENT CALENDAR:

Staff recommends a **YES** vote. Passage of this motion will result in approval of all the permits included on the consent calendar. The motion passes only by affirmative vote of a majority of the Commissioners present.

II. Standard Conditions.

See attached page.

III. Special Conditions.

The permit is subject to the following conditions:

1. Timing of Construction/Staging. PRIOR TO ISSUANCE OF THE COASTAL DEVELOPMENT PERMIT, the applicant shall submit to the Executive Director for review and written approval, a final construction schedule, which shall be incorporated into construction bid documents. The schedule and construction documents shall specify that no construction will take place for the project between Memorial Day weekend and Labor Day of any year. Notes on the schedule and documents shall state that access corridors and staging areas shall be located in a manner that has the least impact on public access via the maintenance of existing public parking areas and traffic flow on coastal access routes (no street closures or use of public parking as staging areas for equipment or materials).

The permittee shall undertake development in accordance with the approved plans. Any proposed changes to the approved plans shall be reported to the Executive Director. No changes to the plans shall occur without an approved amendment to this coastal development permit unless the Executive Director determines that no amendment is required.

IV. Findings and Declarations.

The Commission finds and declares as follows:

1. Detailed Project Description. Proposed is the construction of an approximately 77,400 gallon underground emergency storage tank located on the northeast side of an existing above-ground sewer pump station and installation of a new 8-inch force main for approximately 1900 lineal feet from the pump station, across existing public parkland, terminating at an existing interceptor within North Mission Bay Drive.

The project site is located immediately north of De Anza Cove in Mission Bay Park which is west of Interstate-5. The existing pump station is located at the terminus of De Anza Road. Surrounding uses in the area include a large mobile home park which is situated on De Anza Point, to the west. To the north is park land and a golf course, to the east is Interstate-5 and to the south is De Anza Cove. The purpose of the project is to improve the function of the existing pump station and to reduce the potential for sewage spills.

The project site is within the Commission's area of permit jurisdiction. Thus, the standard of review is Chapter 3 policies of the Coastal Act.

2. Public Access and Recreation. Sections 30210, 30213 and 30220 of the Coastal Act provide for the protection, provision and enhancement of public access and

recreational opportunities in coastal areas. These policies address the public's right of access to the sea and public recreational sites, and require that access considerations be given high priority in reviewing development proposals.

The subject project will take place on public parkland located immediately adjacent to Mission Bay, which is a popular recreational area. As such, the proposal has the potential to adversely affect public access. The proposed project will result in the usurption of parking areas during the construction phase as portions of the route will cross an existing public parking lot in Mission Bay Park (reference Exhibit #2). The proposed construction duration of the project is expected to last approximately seven days. The pavement will be restored and the parking spaces will be replaced at completion of the project. However, due to the proximity of the site to Mission Bay Park and public beaches in the area that surround the bay, construction activities in this area during the peak beach-use season could have a significant adverse impact on public access. Therefore, Special Condition #1 has been attached, which requires the City to submit a construction schedule indicating that no work will take place on this project during the summer months (Memorial Day to Labor Day of any year). In addition, Special Condition #1 requires notes on construction bid documents notifying the contractor that access corridors and staging areas shall be located in a manner that has the least impact on public access and public parking spaces (no use of public parking areas for storage or staging and no closure of public streets).

In addition, the proposal involves the installation of an underground storage tank adjacent to the existing pump station on public park land. The size of existing turf/grassy area that will be usurped/disturbed as a result of placement of the tank will be approximately 1,600 sq.ft. (40' x 40'). However, the City has indicated that upon completion of the proposed project, the turf will be replaced on top of the tank except for a small area (4' x 4') which will contain steel/metal doors to gain access to the underground tank. The doors will be flat on the ground and will not pose a significant impact on public access and recreation in this area. Again, as noted above, work is conditioned to occur during the non-summer months to limit conflicts with public use of the park. Therefore, as conditioned, the Commission finds the project consistent with the cited sections of the Coastal Act, and with all other public access and recreation policies of the Act.

3. Growth Inducement. Section 30250 (a) of the Coastal Act is applicable and states, in part:

(a) New residential, commercial, or industrial development, except as otherwise provided in this division, shall be located within, contiguous with, or in close proximity to, existing developed areas able to accommodate it or, where such areas are not able to accommodate it, in other areas with adequate public services and where it will not have significant adverse effects, either individually or cumulatively, on coastal resources....

The proposed development involves the construction of an emergency underground storage tank for an existing pump station and the construction of a new 8-inch diameter force main. The new force main is the second force main in this area and will follow the existing alignment and route of the existing force main. In addition, the proposed improvements are intended as upgrades to the existing pump station and are not growth inducing. In other words, the upgrades to the existing pump station are being proposed to serve existing development and are not being proposed to accommodate new development. In this particular case, the proposed improvements are proposed to upgrade the existing facility to help reduce the potential for sewage spills. Therefore, the proposed improvements should not have a significant overall inducement to growth. Therefore, the Commission finds that the proposed project, as conditioned, is consistent with Section 30250 (a) of the Coastal Act.

4. Water Quality. Section 30230 and 30231 of the Coastal Act require that the biological productivity of coastal waters, streams, etc., be maintained by, among other means, controlling runoff. The proposed development will occur in close proximity to the bay. As such, drainage and run-off from the development could potentially affect water quality of the ocean. However, in this particular case, the proposed project involves the installation of a 77,400 gallon emergency storage tank below ground and the construction of a second force main between the existing pump station and an existing interceptor. This will improve the function of the existing pump station and reduce the potential for sewage spills. In addition, once completed, only a small 4' x 4' area of improved surface will be created. All other improvements will be underground (either under turf or existing parking lot). The proposed project raises no issues with regard to water quality and can be found consistent with Sections 30230 and 30231 of the Coastal Act.

5. Local Coastal Planning. Section 30604(a) also requires that a coastal development permit shall be issued only if the Commission finds that the permitted development will not prejudice the ability of the local government to prepare a Local Coastal Program (LCP) in conformity with the provisions of Chapter 3 of the Coastal Act. As conditioned, such a finding can be made.

Mission Bay Park, is both an area of deferred certification and an area of original jurisdiction, where the Commission retains permit authority permanently. The project site is zoned Parklands and is designated for Open Space in the certified Mission Bay Park Master Plan. The project site is located within an area of Mission Bay Park in an area of original jurisdiction where the Commission retains permanent permit authority. The improvements are consistent with these designations. The project, as conditioned, has been found consistent with all applicable Chapter 3 policies of the Coastal Act. Therefore, the Commission finds that approval of the conditioned project should not prejudice the ability of the City of San Diego to obtain a certified LCP for the Mission Bay Park segment.

6. California Environmental Quality Act (CEQA). Section 13096 of the Commission's Code of Regulations requires Commission approval of Coastal Development Permits to be supported by a finding showing the permit, as conditioned, to be consistent with any applicable requirements of the California Environmental Quality Act (CEQA). Section 21080.5(d)(2)(A) of CEQA prohibits a proposed development from being approved if there are feasible alternatives or feasible mitigation measures available which would substantially lessen any significant adverse effect which the activity may have on the environment.

The proposed project has been conditioned in order to be found consistent with the public access policies of the Coastal Act. Mitigation measures, including conditions addressing timing of construction, will minimize all adverse environmental impacts. As conditioned, there are no feasible alternatives or feasible mitigation measures available which would substantially lessen any significant adverse impact which the activity may have on the environment. Therefore, the Commission finds that the proposed project is the least environmentally-damaging feasible alternative and can be found consistent with the requirements of the Coastal Act to conform to CEQA.

STANDARD CONDITIONS:

1. Notice of Receipt and Acknowledgment. The permit is not valid and development shall not commence until a copy of the permit, signed by the permittee or authorized agent, acknowledging receipt of the permit and acceptance of the terms and conditions, is returned to the Commission office.
2. Expiration. If development has not commenced, the permit will expire two years from the date on which the Commission voted on the application. Development shall be pursued in a diligent manner and completed in a reasonable period of time. Application for extension of the permit must be made prior to the expiration date.
3. Interpretation. Any questions of intent or interpretation of any condition will be resolved by the Executive Director or the Commission.
4. Assignment. The permit may be assigned to any qualified person, provided assignee files with the Commission an affidavit accepting all terms and conditions of the permit.
5. Terms and Conditions Run with the Land. These terms and conditions shall be perpetual, and it is the intention of the Commission and the permittee to bind all future owners and possessors of the subject property to the terms and conditions.
