### STAFF REPORT: CONSENT CALENDAR

**APPLICATION NUMBER:** 5-03-012  
**APPLICANT:** S&P, LLC  
**AGENT:** Ken Genser  
**PROJECT LOCATION:** 224 N. Toyopa Drive

**PROJECT DESCRIPTION:** Construction of a 7,199 square foot, 31.5 foot high, single-family residence with an attached 3-car garage, and swimming pool. Project will require trimming existing slope to a 1:1 gradient, removing existing retaining walls and construction of a 16-foot high retaining wall along the eastern portion of the property.

| Pavement Coverage:  | 3,550 square feet                |
| Landscape Coverage: | 10,845 square feet               |
| Parking Spaces:     | 3                                |
| Zoning:             | RE20-1 Single-family Residential |
| Ht above nat grade: | 31'-6"                           |

**LOCAL APPROVALS RECEIVED:** City of Los Angeles Approval In Concept

### SUMMARY OF STAFF RECOMMENDATION:

Staff recommends that the Commission approve the proposed project with special conditions requiring: 1) submittal of landscaping plans; 2) submittal of erosion and runoff control plans; 3) recordation of an assumption of risk deed restriction; 4) conformance with geologic and soil recommendations; and 5) recordation of a deed restriction against the property, referencing all of the Standard and Special Conditions contained in this staff report.

**STAFF RECOMMENDATION:**

The staff recommends that the Commission adopt the following resolution:

**I. MOTION, STAFF RECOMMENDATION AND RESOLUTION FOR 5-03-012:**

Staff recommends that the Commission make the following motion and adopt the following resolution:

**MOTION:     *I move that the Commission approve Coastal Development Permit #5-03-012 pursuant to the staff recommendation.***

**STAFF RECOMMENDATION OF APPROVAL:**

Staff recommends a **YES** vote. Passage of this motion will result in approval of the permit as conditioned and adoption of the following resolution and findings. The motion passes only by affirmative vote of a majority of the Commissioners present.

**RESOLUTION TO APPROVE THE PERMIT:**

The Commission hereby approves a permit, subject to the conditions below, for the proposed development and adopts the findings set forth below on grounds that the development as conditioned will be in conformity with the provisions of Chapter 3 of the California Coastal Act and will not prejudice the ability of the local government having jurisdiction over the area to prepare a local coastal program conforming to the provisions of Chapter 3. Approval of the permit complies with the California Environmental Quality Act because either 1) feasible mitigation measures and/ or alternatives have been incorporated to substantially lessen any significant adverse effects of the development on the environment, or 2) there are no further feasible mitigation measures or alternative that would substantially lessen any significant adverse impacts of the development on the environment.

**II.     STANDARD CONDITIONS:**

1. Notice of Receipt and Acknowledgment. The permit is not valid and development shall not commence until a copy of the permit, signed by the permittee or authorized agent, acknowledging receipt of the permit and acceptance of the terms and conditions, is returned to the Commission office.
2. Expiration. If development has not commenced, the permit will expire two years from the date this permit is reported to the Commission. Development shall be pursued in a diligent manner and completed in a reasonable period of time. Application for extension of the permit must be made prior to the expiration date.

3. Interpretation. Any questions of intent or interpretation of any condition will be resolved by the Executive Director or the Commission.
4. Assignment. The permit may be assigned to any qualified person, provided assignee files with the Commission an affidavit accepting all terms and conditions of the permit.
5. Terms and Conditions Run with the Land. These terms and conditions shall be perpetual, and it is the intention of the Commission and the permittee to bind all future owners and possessors of the subject property to the terms and conditions.

### III. SPECIAL CONDITIONS

#### 1. Landscape Plan

**A. PRIOR TO ISSUANCE OF THE COASTAL DEVELOPMENT PERMIT,** the applicants shall submit, for the review and written approval of the Executive Director, a final landscaping plan. The landscaping plan shall conform with the following requirements: (a) all plants shall be low water use plants as defined by the University of California Cooperative Extension and the California Department of Water Resources in their joint publication: "*Guide to estimating irrigation water needs of landscape plantings in California*". (b) The applicant shall not employ invasive, non-indigenous plant species, which tend to supplant native species as identified on the California Native Plant Society publication "California Native Plant Society, Los Angeles -- Santa Monica Mountains Chapter handbook entitled Recommended List of Native Plants for Landscaping in the Santa Monica Mountains, January 20, 1992 " and/or by the California Exotic Pest Council. (c) No permanent irrigation system shall be allowed within the property. Temporary, aboveground irrigation to allow the establishment of the plantings is allowed. (d) Use of California native plants indigenous to the Pacific Palisades/ Santa Monica Mountains area is encouraged. (e) All required plantings shall be maintained in good growing condition throughout the life of the project, and whenever necessary, shall be replaced with new plant materials to ensure continued compliance with the landscape plan.

**B.** The permittee shall undertake development in accordance with the approved final plans. Any proposed changes to the approved final plan shall be reported to the Executive Director. No changes to the approved final plan shall occur without a Commission amendment to this coastal development permit unless the Executive Director determines that no amendment is required.

2. Erosion and Runoff Control Plans

Erosion Control Plan

- I. The erosion control plan shall demonstrate that:
  - (a) During construction, erosion on the site shall be controlled to avoid adverse impacts on adjacent properties.
  - (b) The following temporary erosion control measures shall be used during construction: sand bags, a desilting basin and silt fences.
  - (c) Following construction, erosion on the site shall be controlled to avoid adverse impacts on adjacent properties and public streets.
  - (d) The following permanent erosion control measures shall be installed: a drain to direct roof and front yard runoff to the street; no drainage shall be directed to rear yard slope; no drainage shall be retained in front yard.
  
- II. The plan shall include, at a minimum, the following components:
  - (a) A narrative report describing all temporary run-off and erosion control measures to be used during construction and all permanent erosion control measures to be installed for permanent erosion control.
  - (b) A site plan showing the location of all temporary erosion control measures.
  - (c) A schedule for installation and removal of the temporary erosion control measures.
  - (d) A site plan showing the location of all permanent erosion control measures.
  - (e) A schedule for installation and maintenance of the permanent erosion control measures.

Run-off Control Plan

- I. The run-off control plan shall demonstrate that:
  - (a) Run-off from the project shall not increase the sediment or pollutant load in the storm drain system.
  - (b) Run-off from all roofs, patios, driveways and other impervious surfaces on the site shall be collected and discharged to avoid ponding or erosion either on or off the site.
  
- B. The permittee shall undertake development in accordance with the approved final plans. Any proposed changes to the approved final plans shall be reported to the Executive Director. No changes to the approved final plans shall occur without a Commission amendment to this coastal development permit unless the Executive Director determines that no amendment is required.

3. **ASSUMPTION OF RISK, WAIVER OF LIABILITY AND INDEMNITY**

By acceptance of this permit, the applicant acknowledges and agrees (i) that the site may be subject to hazards from erosion, landslide, or earth movement; (ii) to assume the risks to the applicant and the property that is the subject of this permit of injury and damage from such hazards in connection with this permitted development; (iii) to unconditionally waive any claim of damage or liability against the Commission, its officers, agents, and employees for injury or damage from such hazards; and (iv) to indemnify and hold harmless the Commission, its officers, agents, and employees with respect to the Commission's approval of the project against any and all liability, claims, demands, damages, costs (including costs and fees incurred in defense of such claims), expenses, and amounts paid in settlement arising from any injury or damage due to such hazards.

4. **Conformance of Design and Construction Plans to Geotechnical Report**

A. All final design and construction plans, including foundations, grading and drainage plans, shall be consistent with all recommendations contained in the Geotechnical and Geologic Engineering report prepared by Ralph Stone and company, Inc., dated December 7, 1999. **PRIOR TO THE ISSUANCE OF THE COASTAL DEVELOPMENT PERMIT**, the applicant shall submit, for the Executive Director's review and approval, evidence that an appropriate licensed professional has reviewed and approved all final design and construction plans and certified that each of those final plans is consistent with all of the recommendations specified in the above-referenced soil and geologic evaluation approved by the California Coastal Commission for the project site.

B. The permittee shall undertake development in accordance with the approved final plans. Any proposed changes to the approved final plans shall be reported to the Executive Director. No changes to the approved final plans shall occur without a Commission amendment to this coastal development permit unless the Executive Director determines that no amendment is required.

5. **Deed Restriction**

**PRIOR TO ISSUANCE OF THE COASTAL DEVELOPMENT PERMIT**, the applicant shall submit to the Executive Director for review and approval documentation demonstrating that the applicant has executed and recorded against the parcel(s) governed by this permit a deed restriction, in a form and content acceptable to the Executive Director: (1) indicating that, pursuant to this permit, the California Coastal Commission has authorized development on the subject property, subject to terms and conditions that restrict the use and enjoyment of that property; and (2) imposing the Special Conditions of this permit as covenants, conditions and restrictions on the use and enjoyment of the Property. The deed restriction shall include a legal

description of the entire parcel or parcels governed by this permit. The deed restriction shall also indicate that, in the event of an extinguishment or termination of the deed restriction for any reason, the terms and conditions of this permit shall continue to restrict the use and enjoyment of the subject property so long as either this permit or the development it authorizes, or any part, modification, or amendment thereof, remains in existence on or with respect to the subject property.

#### IV. FINDINGS AND DECLARATIONS:

The Commission hereby finds and declares:

##### A. Project Description and Location

The applicant proposes the construction of a 7,199 square foot, 31'-6" high, as measured from natural grade, single-family residence with an attached 3-car garage, and swimming pool. Project will require trimming existing slope to a 1:1 gradient, and construction of a 16-foot high retaining wall along the eastern portion of the property.

The project site is an 18,385 square foot parcel. The site is located on the east side of Toyopa Drive, approximately 1,200 feet northwest from the intersection of Pacific Coast Highway and Chautauqua Boulevard, within the Pacific Palisades area of the City of Los Angeles (see Exhibit No. 1).

The subject site consists of a level building pad and a rear slope that descends approximately 56 feet, at a gradient of approximately  $\frac{3}{4}$ :1, to Corona Del Mar Street below.

The project site is currently vacant. Three existing retaining walls, varying from one and half feet to four feet high, and walkway, are located at the top of the slope for slope stability and drainage. The existing retaining walls do not meet current building codes and will be removed and replaced with a single 16-foot high retaining wall. The area behind the wall will be backfilled and leveled with the rear yard, which will be lowered approximately 1-2 feet to an elevation of approximately 187 feet. The slope in front of the wall will be trimmed back approximately 1-3 feet to a gradient of 1:1, as required by the City of Los Angeles, to reduce slope sloughing and debris falling onto the road below. All drainage will be directed to the street through non-erosive drainage devices. The applicant has also indicated that the slope will be landscaped using drought tolerant non-invasive vegetation.

The project site is located within a developed single-family residential neighborhood. The parcel is one of two adjoining vacant parcels that the applicant is proposing to develop with a single-family residence. The applicant has submitted a second application for the adjoining lot (application No. 5-03-11)

**B. Development**

As proposed, the development is located within an existing developed area and is compatible with the character and scale of the surrounding area. The project provides adequate parking based on the Commission's typically applied standards. Therefore, the Commission finds that the development conforms with Sections 30250, 30251, and 30252 of the Coastal Act.

**C. Water Quality**

The proposed development has a potential for a discharge of polluted runoff from the project site into coastal waters. The development, as proposed and as conditioned, incorporates design features to minimize the effect of construction and post-construction activities on the marine environment. These design features include, but are not limited to, the appropriate management of equipment and construction materials, reducing runoff through the use of permeable surfaces, the use of non-invasive drought tolerant vegetation to reduce and treat the runoff discharged from the site, and for the use of post-construction best management practices to minimize the project's adverse impact on coastal waters. Therefore, the Commission finds that the proposed development, as conditioned, conforms with Sections 30230 and 30231 of the Coastal Act regarding the protection of water quality to promote the biological productivity of coastal waters and to protect human health.

**D. Deed Restriction**

To ensure that any prospective future owners of the property are made aware of the applicability of the conditions of this permit, the Commission imposes one additional condition requiring that the property owner record a deed restriction against the property, referencing all of the above Special Conditions of this permit and imposing them as covenants, conditions and restrictions on the use and enjoyment of the Property. Thus, as conditioned, this permit ensures that any prospective future owner will receive actual notice of the restrictions and/or obligations imposed on the use and enjoyment of the land in connection with the authorized development, including the risks of the development and/or hazards to which the site is subject, and the Commission's immunity from liability.

**E. Local Coastal Program**

Coastal Act section 30604(a) states that, prior to certification of a local coastal program ("LCP"), a coastal development permit can only be issued upon a finding that the proposed development is in conformity with Chapter 3 of the Act and that the permitted development will not prejudice the ability of the local government to prepare an LCP that is in conformity with Chapter 3. The Pacific Palisades area of the City of Los Angeles has neither a certified LCP nor a certified Land Use Plan. As conditioned, the proposed development will be consistent with Chapter 3 of the Coastal Act. Approval of the project, as conditioned, will not prejudice the ability of the local government to prepare a

Local Coastal Program that is in conformity with the provisions of Chapter 3 of the Coastal Act.

**F. California Environmental Quality Act**

As conditioned, there are no feasible alternatives or additional feasible mitigation measures available that would substantially lessen any significant adverse effect that the activity may have on the environment. Therefore, the Commission finds that the proposed project, as conditioned to mitigate the identified impacts, is the least environmentally damaging feasible alternative and can be found consistent with the requirements of the Coastal Act to conform to CEQA.

The referenced report concerning the proposed construction of a single-family residence with basement, swimming pool and rear-yard retaining wall on each of the subject lots has been reviewed by the Grading Section of the Department of Building and Safety.

A previous Department Approval Letter dated 01/21/2000, Log # 29593 was issued in response to the construction proposed in the 12/07/1999 report. The consultants have stated in the current report that the project essentially remains the same, except for adding a partial basement on each lot. Additional recommendations for the design of the basement retaining wall have been included. Temporary excavation up to 12 feet in height will be required.

The report is acceptable, provided the following conditions are complied with during site development:

1. The portion of all un-surcharged temporary vertical excavations greater than 5 feet shall be sloped back to 1:1 horizontal to vertical slope gradient, as recommended
2. A supplementary report with calculations to justify the safety factor shall be submitted to the Department in case slot cuts are used during temporary excavation to support surcharged loads from existing structures. The calculations shall include the height of the project.

The referenced report concerning a proposed pool, tennis court and single-family dwelling has been reviewed by the Grading Section of the Department of Building and Safety. According to the report, the existing upper 2-3 feet of soil is not suitable for structural support. A steep 3/4:1 45 to 58 ft high slope of terrace deposits descends from the pad. The slope is locally oversteepened with talus collecting at Corona Del Mar street. The report is acceptable, provided the following conditions are complied with during site development:

1. The geologist and soils engineer shall review and approve the detailed plans prior to issuance of any permits. This approval shall be by signature on the plans which clearly indicates that the geologist and soils engineer have reviewed the plans prepared by the design engineer and that the plans include the recommendations contained in their reports.
2. As a minimum, the upper 2-3 feet of soil shall be removed and replaced as certified compacted fill, as recommended.
3. All new fill slopes shall be no steeper than 2:1.
4. The existing descending slope shall be trimmed of all loose material and to a gradient no steeper than 1:1; the existing overhanging footing and slab removed from the top of the slope, as recommended.
5. Foundations shall be supported entirely in terrace deposits or entirely in compacted fill, as recommended (Pgs.6,7).

6. All recommendations of the reports which are in addition to or more restrictive than the conditions contained herein shall be incorporated into the plans.
7. The applicant is advised that the approval of this report does not waive the requirements for excavations contained in the State Construction Safety Orders enforced by the State Division of Industrial Safety.
8. A grading permit shall be obtained.
9. A copy of the subject and appropriate referenced reports and this approval letter shall be attached to the District Office and field set of plans. Submit one copy of the above reports to the Building Department Plan Checker prior to issuance of the permit.
10. The geologist and soil engineer shall inspect all excavations to determine that conditions anticipated in the report have been encountered and to provide recommendations for the correction of hazards found during grading.
11. All man-made fill shall be compacted to a minimum 90 percent of the maximum dry density of the fill material per the latest version of ASTM D 1557; or 95 percent where less than 15 percent fines passes 0.005mm.
12. All roof and pad drainage shall be conducted to the street in an acceptable manner.
13. Prior to issuance of the building permit, the design of the subdrainage system required to prevent possible hydrostatic pressure behind retaining walls shall be approved by the soils engineer and accepted by the Department. Installation of the subdrainage system shall be inspected and approved by the soils engineer and by the City grading inspector.
14. Footings adjacent to a descending slope steeper than 3:1 in gradient shall be located a distance of one-third the vertical height of the slope but need not exceed 40 feet measured horizontally from the face of the slope.
15. If old septic tanks or cesspools are encountered on the site they are removed and recompacted per City of Los Angeles, Memorandum of General Distribution #54.
16. The dwelling shall be connected to the public sewer system.
17. Unsurcharged temporary excavations exposing fill and soil shall be trimmed to 1:1, as recommended.
18. The proposed swimming pool shall be designed for a freestanding condition, as recommended (Pg.9).
19. Seismic design shall satisfy the LABC minimums based on: Soil Profile Type Sd, a Type B fault with closest distance to seismic source of less than 2 km, as recommended.
20. Unsurcharged temporary excavations above 5 ft in height shall be trimmed to 1:1, as

Page 3  
222 & 226 Toyopa Dr

recommended.

- 21. A structure shall be considered surcharging an excavation or swimming pool, if the structure is located within a horizontal distance from the top of excavation equal to the depth of the excavation as specified in Code Section 91.3301 2.3.1
- 22. Prior to issuance of any permit which authorizes an excavation, where the excavation is to extend lower than the walls or foundations of any adjoining building or structure located closer to the property line than the depth of the excavation, the owner of the subject site shall provide the Department with evidence that the adjacent property owner has been given a 30-day written notice of such intent to make an excavation.
- 23. Prior to the placing of compacted fill, a representative of the consulting Soils Engineer shall inspect and approve the bottom excavations. He shall post a notice on the job site for the City Grading Inspector and the Contractor stating that the soil inspected meets the conditions of the report, but that no fill shall be placed until the City Grading Inspector has also inspected and approved the bottom excavations. A written certification to this effect shall be filed with the Department upon completion of the work. The fill shall be placed under the inspection and approval of the Foundation Engineer. A compaction report shall be submitted to the Department upon completion of the compaction.
- 24. Prior to the pouring of concrete, a representative of the consulting Soil Engineer shall inspect and approve the footing excavations. He shall post a notice on the job site for the City Building Inspector and the Contractor stating that the work so inspected meets the conditions of the report, but that no concrete shall be poured until the City Building Inspector has also inspected and approved the footing excavations. A written certification to this effect shall be filed with the Department upon completion of the work.
