Attn: Michael Connelly

RE: NE-024-03, Caltrans, Modifications to Interstate 5, National City, San Diego Co.

Dear Mr. April:

The Coastal Commission staff received your March 17, 2003, letter requesting Commission concurrence with a consistency certification for the addition of north- and south-bound auxiliary lanes between the 24<sup>th</sup> St. and Harbor Drive I-5 undercrossings in National City.

In its issuance of a National City-issued coastal development permit (No. CDP-2002-5) for the project, the City noted that the project includes best management practices and is consistent with the City's certified LCP. The project will not adversely affect environmentally sensitive habitat, public access and recreation, or water quality. The City has granted a coastal development permit for the facility, in an area where the permit was appealable to the Commission, and the appeal period has run with no appeals being filed.

The Coastal Commission staff has decided not to act on this consistency certification. This decision is based on the fact that the project received a CDP from the City and that permit addressed all relevant coastal resource issues. Pursuant to regulations implementing the Coastal Zone Management Act, the Commission's concurrence in your consistency certification "shall be conclusively presumed" if the Commission does not either concur in or object to that certification (15 CFR § 930.62(a)). If you have questions, please contact Mark Delaplaine, federal consistency supervisor, at (415) 904-5289.

Sincerely,

A handwritten signature in black ink, appearing to read "Peter M. Douglas".

PETER M. DOUGLAS  
Executive Director

Re: **NE-017-03** No Effects Determination, City of Dana Point, Salt Creek Storm Drain Treatment Facility, Dana Point, Orange Co.

Dear Mr. Smith:

The Coastal Commission staff received your February 28, 2003, letter requesting Commission concurrence with a consistency certification for the above-referenced project: the construction of a pump station and treatment facility to treat low flows from the Salt Creek watershed Dana Point. The project would consist of construction of a 1500-1700 sq.ft. concrete facility (containing water treatment features) at the southwest side of Ritz Cove Drive. The project would also include perimeter security fencing, a pump station at the mouth of the creek adjacent to the existing storm drain outlet, and restacking existing riprap in front of the storm drain outlet.

The project will not adversely affect environmentally sensitive habitat. The project will benefit beach recreation and public access by reducing bacteria and beach closures. The project will not affect sand supply to or at the beaches. The City has granted a coastal development permit for the facility (CDP-02-16), in an area where the permit was appealable to the Commission, and the appeal period has run with no appeals being filed. City-imposed conditions included requirements for erosion controls and Best Management Practices, landscaping, protection of archaeological resources, and prohibiting any future shoreline protective devices to protect the shoreline pump station (a concern expressed by the Commission staff).

The Coastal Commission staff has decided not to act on this consistency certification. This decision is based on the fact that the project received a CDP from the City and that permit addressed all relevant coastal resource issues. Pursuant to regulations implementing the Coastal Zone Management Act, the Commission's concurrence in your consistency certification "shall be conclusively presumed" if the Commission does not either concur in or object to that certification (15 CFR § 930.62(a)). If you have questions, please contact Mark Delaplaine, federal consistency supervisor, at (415) 904-5289.

Sincerely,

A handwritten signature in black ink, appearing to read "Peter M. Douglas".
