RECORD PACKET COPY

TH 18a

Filed: 8/18/04
 49th Day: 10/6/04
 180th Day: 2/14/05
 Staff: AJP-LB
 Staff Report: 12/15/04
 Hearing Date: 1/12-14/05
 Commission Action:

STAFF REPORT: REGULAR CALENDAR**APPLICATION NUMBER:** 5-04-291**APPLICANT:** Norman Kravetz**AGENT:** Thomas H. Landau**PROJECT LOCATION:** 1540 Second Street, Santa Monica

PROJECT DESCRIPTION: Demolition of a restaurant and construction of a 61,600 square foot 45-foot high, as measured from existing grade, commercial building with 6,721 square feet of ground floor retail and 4,400 square feet of restaurant use, 41,917 square feet of office use on the second and third floors, and 299 parking spaces provided on the ground floor and within three levels of subterranean parking. The building design will also include two 59-foot high elevator towers.

Lot Area:	37,500 square feet
Building Coverage:	28,455 square feet
Pavement Coverage:	8,323 square feet
Landscape Coverage:	692 square feet
Parking Spaces:	299
Zoning:	C3-Downtown Commercial
Ht above final grade:	45 feet

SUMMARY OF STAFF RECOMMENDATION:

Staff recommends approval with special conditions on the basis that the project, as conditioned, conforms with the public access and resource protection policies of the Coastal Act. Special Conditions include: 1) submittal of revised plans to reduce the height of the development to a height below the sightline from the adjacent viewing deck of Santa Monica Place; 2) requirement to make available to the public all parking during weekdays, weekends and holidays after regular business hours; 3) attendant parking requirement; 4) participation in a parking, car pool and transit incentive program; 5) parking signage; 6) dewatering requirements; 7) water quality mitigation; 8) archaeological resource recovery plan; 9) conformance with geotechnical recommendations; and 10) recordation of a deed restriction against the property referencing all of the Standard and Special Conditions contained in this staff report.

LOCAL APPROVALS RECEIVED: Development Review permit 98-012; CUP 98-046; VAR98-053

SUBSTANTIVE FILE DOCUMENTS: Santa Monica certified Land Use Plan, certified in 1992; CDP No. 5-88-062, 5-84-866, 5-81-554, 5-94-172, A-253-80, and A-69-76.

I. STAFF RECOMMENDATION:

MOTION: *I move that the Commission approve Coastal Development Permit No. 5-04-291 pursuant to the staff recommendation.*

STAFF RECOMMENDATION OF APPROVAL:

Staff recommends a **YES** vote. Passage of this motion will result in approval of the permit as conditioned and adoption of the following resolution and findings. The motion passes only by affirmative vote of a majority of the Commissioners present.

RESOLUTION TO APPROVE THE PERMIT:

The Commission hereby approves a coastal development permit for the proposed development and adopts the findings set forth below on grounds that the development as conditioned will be in conformity with the policies of Chapter 3 of the Coastal Act and will not prejudice the ability of the local government having jurisdiction over the area to prepare a Local Coastal Program conforming to the provisions of Chapter 3. Approval of the permit complies with the California Environmental Quality Act because either 1) feasible mitigation measures and/or alternatives have been incorporated to substantially lessen any significant adverse effects of the development on the environment, or 2) there are no further feasible mitigation measures or alternatives that would substantially lessen any significant adverse impacts of the development on the environment.

II. STANDARD CONDITIONS:

1. **Notice of Receipt and Acknowledgment.** The permit is not valid and development shall not commence until a copy of the permit, signed by the permittee or authorized agent, acknowledging receipt of the permit and acceptance of the terms and conditions, is returned to the Commission office.
2. **Expiration.** If development has not commenced, the permit will expire two years from the date this permit is reported to the Commission. Development shall be pursued in a diligent manner and completed in a reasonable period of time. Application for extension of the permit must be made prior to the expiration date.

3. Interpretation. Any questions of intent or interpretation of any condition will be resolved by the Executive Director or the Commission.
4. Assignment. The permit may be assigned to any qualified person, provided assignee files with the Commission an affidavit accepting all terms and conditions of the permit.
5. Terms and Conditions Run with the Land. These terms and conditions shall be perpetual, and it is the intention of the Commission and the permittee to bind all future owners and possessors of the subject property to the terms and conditions.

III. SPECIAL CONDITIONS

1. Revised Plans

PRIOR TO ISSUANCE OF THE COASTAL DEVELOPMENT PERMIT, the applicant shall submit, for the review and written approval of the Executive Director, revised project plans showing that the height of the development is reduced in height as follows:

a) Northern portion of the project, as shown as within View Corridor "A" in Exhibit No. 10 to the December 15, 2004 staff report, located between the existing 36 foot high building to the west (CDP No. 5-81-554) and Santa Monica Place view deck to the east, shall be limited to: 36.3 feet, as measured from existing grade, along the western property line to a maximum of 38.94 feet, as measured from existing grade, along the eastern property line. No portion of the building shall exceed the height established by the sightline drawn, based on the above maximum heights, from the western boundary line to the eastern property line of the proposed project site.

b) Southern portion of the project, as shown as within View Corridor "B" in Exhibit No. 10 to the December 15, 2004 staff report, located between the 28 foot high building to the west (CDP No. 5-81-554) and Santa Monica Place view deck to the east, shall be limited to: 33 feet, as measured from existing grade, along the western property line to a maximum of 36.3 feet, as measured from existing grade, along the eastern property line, for that portion of the property that is within the view corridor. No portion of the building shall exceed the height established by the sightline drawn, based on the above maximum heights, from the western boundary line to the eastern property line of the proposed project site.

The permittee shall undertake the development in accordance with the approved plans. Any proposed changes to the approved plans shall be reported to the Executive Director. No changes to the plans shall occur without a Coastal Commission approved amendment to this coastal development permit unless the Executive Director determines that no amendment is required.

2. Public Parking

All on-site parking provided by the project for retail and office use shall be open for public parking after business hours on weekdays, weekends, and holidays, consistent with the hours of the beach and pier parking hours. If a fee is charged, rates shall not exceed that charged at the public beach parking lots.

3. Future parking changes

With the acceptance of this permit, the applicant acknowledges that any change in the parking proposed under this permit, including but not limited to elimination of the parking attendant service or change in hours that the parking attendant service is available, will require an amendment to this permit.

4. Public Signage

PRIOR TO ISSUANCE OF THE COASTAL DEVELOPMENT PERMIT, the applicant will submit, for the review and written approval of the Executive Director, a signage plan showing the size, wording and location of signs. The size of the signs shall be at least 14" in height and 18" in length. The signage shall be located in conspicuous locations along Second Street and Colorado Avenue, informing the public of the availability and location of the availability of public parking.

The permittee shall undertake the development in accordance with the approved plans. Any proposed changes to the approved plans shall be reported to the Executive Director. No changes to the plans shall occur without a Coastal Commission approved amendment to this coastal development permit unless the Executive Director determines that no amendment is required.

5. Parking, Car Pool and Transit Incentive Program

The applicant shall provide for a parking, carpool and transit incentive program as follows:

(1) The applicant shall actively encourage employee participation in a Transportation Ride Sharing.

(2) A public transit fare reimbursement program shall be implemented by the applicant. The system shall be in effect for at least a 30-year period. The applicant shall provide for partial reimbursement to one hundred percent of the employees of the development for public transit fare to and from work.

(3) The applicant shall provide a bicycle parking area, free of charge, on the property.

(4) The applicant shall implement a publicity program, the contents of which is subject to the review and approval of the Executive Director, that indicates how the future occupants of the development will be made aware of the provisions of this special condition. The

publicity program shall be implemented during the first month of occupancy of the new development.

6. Dewatering of Groundwater

PRIOR TO ISSUANCE OF THE COASTAL DEVELOPMENT PERMIT, the applicant shall provide, for the review and approval by the Executive Director, a written agreement providing that any required dewatering of the site due to groundwater intrusion, or percolating surface water, during construction or post-construction will require filters to be installed on all dewatering pumps and sump pumps. Such dewatering shall comply with the State of California Regional Water Quality Control Board or the Sanitary District discharge requirements.

7. Water Quality Standards

With the acceptance of this permit the applicant agrees to comply with all applicable City of Santa Monica water quality requirements as required under the City's Municipal Code that are in effect at the time of approval of this permit.

8. Archaeological Resources

A. PRIOR TO ISSUANCE OF THE COASTAL DEVELOPMENT PERMIT, the applicant shall submit for the review and approval of the Executive Director an archeological monitoring plan prepared by a qualified professional, that shall incorporate the following measures and procedures:

1. The monitoring plan shall ensure that any prehistoric or historic archaeological or paleontological cultural resources that are present on the site and could be impacted by the approved development will be identified so that a plan for their protection can be developed. To this end, the cultural resources monitoring plan shall require that archaeological and Native American monitors be present during all grading operations unless the applicant submits evidence, subject to the review and approval of the Executive Director, that a more complete survey of cultural resources adjacent to and within a one-half mile radius of the project site finds no cultural resources. If cultural resources are found adjacent to, or within a one-half mile radius of the project site, the applicant may choose to prepare a subsurface cultural resources testing plan, subject to the review and approval of the Executive Director, in-lieu of proceeding with development with the presents of archaeological and Native American monitors on the site during grading activities. If the subsurface cultural resources testing plan results in the discovery of cultural resources, the applicant shall prepare a mitigation plan, which shall be peer reviewed and reviewed by the appropriate Native American tribe, and shall apply for an amendment to this permit in order to carry out the mitigation plan.

There shall be at least one pre-grading conference with the project manager and grading contractor at the project site in order to discuss the potential for the discovery of archaeological or paleontological resources.

2. Archaeological monitor(s) qualified by the California Office of Historic Preservation (OHP) standards, Native American monitor(s) with documented ancestral ties to the area appointed consistent with the standards of the Native American Heritage Commission (NAHC), and the Native American most likely descendent (MLD) when State Law mandates identification of a MLD, shall monitor all project grading, if required in the approved cultural resources monitoring plan required above.
3. If required by the above cultural resources monitoring plan to have archeological and Native American monitors present during grading activities, the permittee shall provide sufficient archeological and Native American monitors to assure that all project grading that has any potential to uncover or otherwise disturb cultural deposits is monitored at all times;
4. If any archaeological or paleontological, i.e. cultural deposits, are discovered, including but not limited to skeletal remains and grave-related artifacts, artifacts of traditional cultural, religious or spiritual sites, or any other artifacts, all construction shall cease within at least 50 feet of the discovery, and the permittee shall carry out significance testing of said deposits in accordance with the attached "Cultural Resources Significance Testing Plan Procedures" (Appendix 1). The permittee shall report all significance testing results and analysis to the Executive Director for a determination of whether the findings are significant.
5. If the Executive Director determines that the findings are significant, the permittee shall seek an amendment from the Commission to determine how to respond to the findings and to protect both those and any further, cultural deposits that are encountered. Development within at least 50 feet of the discovery shall not recommence until an amendment is approved, and then only in compliance with the provisions of such amendment.

9. Conformance of Design and Construction Plans to Geotechnical Report

A. All final design and construction plans, including foundations, floor plans and grading shall be consistent with all recommendations contained in the Geotechnical Report prepared by Ralph Stone and Company, dated August 9, 2003. **PRIOR TO THE ISSUANCE OF THE COASTAL DEVELOPMENT PERMIT**, the applicants shall submit, for the Executive Director's review and approval, evidence that an appropriate licensed professional has reviewed and approved all final design and construction plans and certified that each of those final plans is consistent with all of the recommendations specified in the above-referenced geologic evaluation approved by the California Coastal Commission for the project site.

B. The permittees shall undertake development in accordance with the approved final plans. Any proposed changes to the approved final plans shall be reported to the Executive Director. No changes to the approved final plans shall occur without a Commission amendment to this coastal development permit unless the Executive Director determines that no amendment is legally required.

10. Deed Restriction

PRIOR TO ISSUANCE OF THE COASTAL DEVELOPMENT PERMIT, the applicant shall submit to the Executive Director for review and approval documentation demonstrating that the applicant has executed and recorded against the parcel(s) governed by this permit a deed restriction, in a form and content acceptable to the Executive Director: (1) indicating that, pursuant to this permit, the California Coastal Commission has authorized development on the subject property, subject to terms and conditions that restrict the use and enjoyment of that property; and (2) imposing the Special Conditions of this permit as covenants, conditions and restrictions on the use and enjoyment of the Property. The deed restriction shall include a legal description of the entire parcel or parcels governed by this permit. The deed restriction shall also indicate that, in the event of an extinguishment or termination of the deed restriction for any reason, the terms and conditions of this permit shall continue to restrict the use and enjoyment of the subject property so long as either this permit or the development it authorizes, or any part, modification, or amendment thereof, remains in existence on or with respect to the subject property.

IV. FINDINGS AND DECLARATIONS:

The Commission hereby finds and declares:

A. Project Description and Location

The applicant proposes to demolish an existing 1-story, 20 foot high, approximately 2,900 square foot restaurant (McDonalds) and construct a 45 foot high, above existing grade, 3-story, 61,600 square foot mixed use development consisting of retail, restaurant and office space, with two elevator towers located in the northeast corner and southeast corner extending to a height of 59 feet. The project will include a 4,400 square foot McDonald's restaurant and 6,721 square feet of visitor serving retail on the first floor. The second and third floors will contain approximately 41,917 square feet of general office space. The development will have a 3 level, 13,340 square foot, subterranean parking garage for 269 cars, and 30 at-grade spaces.

The proposed project site is an .87-acre, or 37,500 square foot, lot located on the northwest corner of Second Street and Colorado Avenue, in the City of Santa Monica (see Exhibit No. 2-4). The project site is one block from the bluffs overlooking Pacific Coast Highway and the beach at Palisades Park, and the entrance to the Santa Monica Pier.

The project is located in the City's Downtown Commercial District. The site and surrounding area is zoned C3-Downtown Commercial, which allows general retail, office, residential, hotel, and visitor-serving uses.

The project site is situated west of the Santa Monica Place shopping center. The City's certified Land Use Plan (LUP) designates the area west of Santa Monica Place as a view corridor. Projects within the view corridor require special consideration to preserve such views.

B. Impact to Public Views

The following policies of the Coastal Act and the certified LUP are applicable to the issue of public views. Section 30251 of the Coastal Act states:

The scenic and visual qualities of coastal areas shall be considered and protected as a resource of public importance. Permitted development shall be sited and designed to protect views to and along the ocean and scenic coastal areas, to minimize the alteration of natural land forms, to be visually compatible with the character of surrounding areas, and where feasible, to restore and enhance visual quality in visually degraded areas. New development in highly scenic areas such as those designated in the California Coastline Preservation and Recreation Plan prepared by the Department of Parks and Recreation and by local government shall be subordinate to the character of its setting.

In addition, the Santa Monica LUP, certified with suggest modifications, has a number of policies to ensure that the visual resources of the Santa Monica coastal zone are protected. The policies are as follows:

Policy 66 states in part that:

...Permitted development including public works of art shall be sited and designed to:

- a. protect views to and along the ocean and scenic coastal areas;*
- b. minimize the alteration of natural landforms; and*
- c. be visually compatible with the character of surrounding areas and restore and enhance visual quality in visually degraded areas.*

Policy 71 states:

The City shall develop standards to assure that new development along Adelaide Drive and all other scenic corridors and designed viewing areas, as identified in the Scenic and Visual Resources Map#13, is designed and sited to be visually compatible with the character of the surrounding area, restores and enhances visual quality in visually degraded areas, and protects public views to the coast and scenic coastal areas. Public views shall mean views to the ocean from the public right of way of streets and designated public viewing areas.

As stated, the project is located in the City's Downtown area and is zoned C-3, Downtown Commercial. The certified LUP, certified in 1992, allows development in the Downtown core to a height of 6 stories, 84 feet. In 1992, the height allowed under the LUP was consistent with the City's zoning; however, since 1992, the City has reduced the height limit in the C-3 zone to 3 stories and 45 feet (mechanical equipment is permitted by code to exceed the height limit).

The proposed mixed-use development will be 3-stories, 45 feet high above existing grade with two elevator towers extending to 59 feet. The proposed project site is located on the west side of 2nd Street, and north of Colorado Avenue, and west of Santa Monica Place shopping center. Santa Monica Place is a three-level, enclosed downtown shopping center, which along with the outdoor Third Street Promenade, forms the City's downtown retail core. A significant issue associated with this project is its impact on public views, in particular, the views from the public viewing decks at Santa Monica Place.

The LUP's Scenic and Visual Resources Map designates the area west of Santa Monica Place as a Scenic Corridor. The Santa Monica view corridor extends from the second and third level exterior decks located on the west side of Santa Monica Place shopping center along Second Street, and ranges between Colorado Avenue to the south and Broadway Avenue to the North (see Exhibit No. 10). The development of the viewing decks at Santa Monica Place were a specific requirement of the Commission in Appeal No. 69-76. In 1977, the State Commission approved the shopping center (Appeal 69-76) with a number of conditions. One of the conditions required viewing decks on the second and third levels along the western portion (Second Street) of the shopping center. The condition required 10,000 square feet of open deck space with an ocean orientation on the second and third levels of the shopping center, along with requiring that at least 5,000 square feet of commercial area be used for public use facilities, such as restaurants.

Although the views would be intermittent due to existing development located between the shopping center and the ocean, the Commission found the views substantial enough to require viewing decks as a condition of approval of the development of Santa Monica Place, and to limit the height of future development within the Santa Monica Place view corridor in order to protect those views.

The open viewing decks of Santa Monica Place, which are at 17.5 feet and 35 feet above sidewalk level, offer views to portions of the pier, sandy beach, and to the ocean and its horizon. The available views are over and between the mix of commercial and residential development bordered by Second Street on the east, Colorado Avenue to the south, Ocean Boulevard to the west, and Broadway Avenue to the north. These views are intermittent due to blockage by existing buildings and/or large trees along Second Street and Palisades Park. Furthermore, views from the second level deck, because of the deck's low elevation are generally blocked by existing development and trees. Views available over the proposed project site from the viewing decks of Santa Monica Place include, portions of sandy beach, the ocean, ocean horizon, and a portion of the Ferris wheel on the pier and pier itself.

Since the approval of Santa Monica Place in 1977, the Commission has reviewed four projects (CDP No.: 5-88-062; 5-84-866; 5-81-554; and 5-94-172) that are within the view corridor of

Santa Monica Place. Two of the projects (CDP No.: 5-84-866 and 5-88-062) located in the northern portion of the view corridor and northern end of the block were approved with no discussion on view issues with respect to Santa Monica Place (see Exhibit No. 9). These two projects were approved prior to the certification of the 1991 City of Santa Monica Land Use Plan that incorporated the Santa Monica Place view corridor into the plan's view protection policies. The 1987 Land Use Plan that was approved by the Commission, but never adopted by the City, did not include the view corridor in its view protection policies.

In Coastal Development permit no. 5-94-172, which is located two lots to the north of the proposed project site, the Commission required the project to be designed to cut back the second story's southwest corner to minimize the view blockage from the view deck of Santa Monica Place.

View blockage from Santa Monica was also an issue in Coastal Development Permit No. 5-81-554. This project is located adjacent to and directly west of the project site at the corner of Ocean Avenue and Colorado Avenue (1551 Ocean Avenue. See Exhibit No. 9 for location of development). The approved project was for the demolition of a restaurant and gas station and construction of a mixed use commercial, office and residential development consisting of two separate buildings. The two separate buildings were designed and approved at 28 feet and 36 feet, after the State Commission expressed concern over the applicant's initial proposed design of 90 feet and the project's adverse impacts to public views from the viewing decks from Santa Monica Place. As designed and approved, the 36 foot high building was placed in the northern half of the site where it was determined that that portion of the site was more suited for the taller building and it minimized view impacts of Santa Monica Bay and Pier from the Santa Monica Place viewing decks. The Commission further found that views over the southern portion of the site were considered more significant due to less existing visual obstructions; therefore, the building that was proposed in the southern portion was designed at 28 feet to protect views from Santa Monica Place (see Exhibit No. 9). The Commission further found that as designed, the mixed-use development would not conflict with the Commission's previous permit action regarding the view corridor of Santa Monica Place (Appeal No. 69-76).

Today, the view decks of Santa Monica Place continue to be available to the general public with access from Second Street and from within the shopping center, as well as direct access from the adjacent shopping center's parking structure. However, the City has indicated that they have recently been in preliminary discussions with the owners of Santa Monica Place for redevelopment of the shopping center. Conceptual plans that have been recently unveiled to the public show a mixed-use development with condominium towers, rental units, office space, and park space built above retail shops and restaurants. The conceptual development would extend the City's Downtown Third Street Promenade retail area through the Santa Monica Place property to Colorado Avenue.

These plans are only conceptual and still need to go through the local government development approval process. At this time, since the planning is only in the conceptual stage, it is not known what the final plans for the mall are and how such plans may affect the existing viewing decks. However, it is also possible that redevelopment may not occur or redevelopment will not affect the viewing decks. It is also possible that if the redevelopment of

the shopping center comes before the Commission, the Commission may require the replacement of the viewing decks consistent with the Commission permit action in appeal No. 69-76.

At this time, however, the redevelopment of the mall is only in the preliminary discussion stage at the City and it is not known if or when redevelopment will go forward. Currently, Santa Monica Place is operating and the view decks are open to the public. Therefore, views from the view decks should continue to be protected.

In the Environmental Impact Report that was prepared for the project, potential view impacts from Santa Monica Place were addressed. The EIR states that:

The majority of the proposed structure would be about 45 feet tall. This elevation would remain consistent with the surrounding land uses, such as the mixed-use commercial/residential land use locate to the west of the project site and would; therefore, not obstruct or diminish views of the Pacific Ocean. However, the project's design also incorporates the development of two tower units, designed to screen mechanical equipment associated with the elevators. These tower units are approximately 59 feet tall. Although the tower units exceed the building height restriction of 56 feet, they are permitted by code to project above the maximum height limit. Given the extended height of the tower units the project could potentially obstruct a portion of the view from the Santa Monica Place terrace. It is anticipated that the view would only be partially obstructed due to the limited mass of these tower units. The space between and around the tower units would still provide a viewing corridor of the Pacific Ocean...

In the City's staff report to the City Council for certification of the Final EIR, the report states:

Existing development and street trees already obscure most of the ocean views to the west from the 2nd and 3rd floor viewing platforms. The EIR concluded that since the 45' height of the project is consistent with the height of the commercial/residential land uses to the west of the site and the two, 59' tall elevator penthouse have limited mass, the view obstruction of the proposed project has a less than significant environmental impact.

Commission staff does not concur with the City's findings. First, based on Commission permit records, the proposed project is not consistent with the height of the commercial/residential land use to the west (1551 Ocean Avenue). The commercial/residential land use to the west that the City's report is referring to is the project approved by the Commission in Coastal Development Permit No. 5-81-554. The two building development was approved by the Commission with heights of 28 feet and 36 feet. The proposed 45-foot roof line of the proposed development will extend 9 feet to 17 feet over the Commission approved development, with the proposed 59 foot elevator tower in the northeast corner extending 23 feet to 31feet over the adjacent existing roof lines. Second, it is not evident in the EIR or City staff report how the view analysis was conducted. The EIR includes only a pictorial analysis of the area and does not include existing building heights and elevation comparisons.

Furthermore, the applicant has submitted photographs of the view corridor over the project site with the proposed development superimposed on the photograph. In the photograph it shows minor impacts to the coastal views caused by the roofline and tower. However, based on a elevation drawing and a sightline analysis conducted and submitted for Coastal Development

Permit No. 5-81-554, staff does not agree with the applicant's visual interpretation of the view impacts.

In order to ascertain impacts to views from the viewing decks, a view analysis needs to include a sight line analysis that includes surveyed building elevations of existing and proposed development from sightlines drawn from the view decks to the roof lines of the adjacent buildings. Based on Commission records from previous permits, Commission staff prepared a sight line analysis given the information on the height of the view decks and the existing development to the west (CDP No. 5-81-554), and distances of the existing and proposed buildings from the view decks.

Based on maps of the view corridor, it is shown that the proposed project is located in the southern portion of the view corridor (see Exhibit No. 10). The southern edge of the view corridor runs from the viewing decks to the northwest corner of the existing building (Holiday Inn) located on the south side of Colorado Boulevard. This southern edge of the view corridor bisects the southeastern portion of the site where approximately 3,040 square feet, or 8% of the 37,470 square foot lot is located outside of the view corridor (see Exhibit No. 10). The northern edge of the Santa Monica Place view corridor is approximately 160 feet from the proposed project's northern property line; therefore, the remaining 34,430 square feet of lot area, or 92% of the property, is located within the view corridor.

Since views are generally blocked from the second level deck of Santa Monica Place by existing one and two story development located west of the view decks, Commission staff used a sightline analysis from only the third level deck. A sightline drawn over the project site from the third level deck to the furthest western edge of the existing development to the west of the project site shows that the maximum building height in front (east side) of the 28 foot high building, previously approved by the Commission, would be tapered and range from approximately 36 feet along the eastern property line to 33 feet along the western property line of the proposed project site. The maximum building height in front (east side) of the 36 foot high building would taper from approximately 39 feet along the eastern property line to 36 feet along the western property line of the proposed project site (see Exhibit No. 12).

Although the southeastern portion (3,040 square feet) of the site is outside of the view corridor, the remaining portion is in. As stated, within the view corridor over the proposed project site and extending west over the existing roof line of the development previously approved by the Commission, views of the ocean, ocean horizon, pier, and beach are available. The proposed project with a roofline at 45 feet and elevator towers (northeast and northwest towers) extending to 59 feet, the proposed project will eliminate all views including views of the ocean horizon (see Exhibit No. 8 and 11).

The applicant has proposed as an alternative to reducing the height of the development, to provide a view deck within the development to provide ocean views from the project site, or to modify portions of the roofline to provide view corridors through the development to protect some views across their property from Santa Monica Place third story viewing deck.

The proposed addition of a public view deck within development that is located within the Santa Monica Place view corridor has been proposed and rejected as an alternative in a past permit project. On the property located directly west of the proposed project site, and at the corner of Ocean Avenue and Colorado Avenue, after the Regional Commission approved an office development (CDP No. 7098) on the site, the State Commission, on appeal (A-253-80), found substantial issue with the 90-foot high office development. The project included a public view deck on the second floor that would have provided a wider view angle than what was available over the property from Santa Monica Place. One of the issues that the Commission was concerned with was the height of the project and view blockage from Santa Monica Place. Subsequently, after working with Commission staff, the applicant resubmitted a new application for a completely revised project and the Commission approved the permit (CDP No. 5-81-554). In Coastal Development Permit No. 5-81-544, the project was revised to the construction of a commercial/office/residential project consisting of two separate buildings measuring 28 feet and 36 feet in height. In terms of the view issues, the Commission found that the proposed project would not conflict with the previous permit action for Santa Monica Place and would continue to protect views from the viewing decks.

Furthermore, a view deck within the proposed two-story mixed use building, with office use on the second floor, would not be conducive to public use. Without visitor serving uses on the upper floor to attract the public, a view deck would be less attractive as compared to being located within a development that is designed and used by the general public, such as, the Santa Monica Place mall.

The second alternative suggested by the applicant is to provide view corridors through the proposed development to protect a portion of the views that are currently available across the property. This proposal would only protect a limited amount of the available views. The applicant has not submitted any information for staff to review to determine the amount of views that will be protected or that will be lost. However, as indicated, views within the Santa Monica Place view corridor are limited, and the elimination of existing views will have a significant impact on total amount of available views. There are approximately five properties, including this project site, within this view corridor that have not been redeveloped. Over the last two years, Commission Staff has had meetings and inquiries regarding redevelopment of a number of these properties; therefore, potential for further loss of these limited views is high.

Therefore, to protect the coastal views over the project site, which is within the view corridor of Santa Monica Place, and to be consistent with past permit action for the area, the proposed project is conditioned to require the height of the project to be reduced in height so as not to exceed a sightline drawn from the third level viewing deck of Santa Monica Place to the western roof edge(s) of the development located to the west of the project site, as shown in Exhibit No. 12. The height condition would limited the northern portion of the project, which is located immediately east of the 36 foot high building to the west (CDP No. 5-81-554), to a height of 36.3 feet along the western property line to a maximum of 38.94 feet along the eastern property line. The southern portion of the project, which is located immediately east of the 28 foot high building to the west (CDP No. 5-81-554), and partially within the view corridor (see Exhibit No. 10), would be limited to a height of 33 feet along the western property line to a

maximum of 36.3 feet along the eastern property line, for that portion of the property that is within the view corridor.

As conditioned, the limitation of the height of the structure would keep the proposed development below the sightline created by the two buildings at the corner of Ocean Avenue and Colorado Avenue (CDP No. 81-554) and the third level view deck of Santa Monica Place required under CDP No. A-69-76 and would preserve the coastal views over the proposed project site. Therefore, only as conditioned, will the proposed project be consistent with Section 30251 of the Coastal Act and the guidance provided by policies 35, 66 and 71 of the certified LUP.

C. New Development

Section 30250 of the Coastal Act states in part:

(a) New residential, commercial, or industrial development, except as otherwise provided in this division, shall be located within, contiguous with, or in close proximity to, existing developed areas able to accommodate it or, where such areas are not able to accommodate it, in other areas with adequate public services and where it will not have significant adverse effects, either individually or cumulatively, on coastal resources....

The proposed project will be located in downtown Santa Monica which consists of a mixture of office, retail, residential, and visitor-serving commercial uses. The Commission in prior actions on Coastal permits has indicated that downtown Santa Monica is a location in which new commercial development should be concentrated. Furthermore, policy #70 of the City's certified Land Use Plan states that:

Allowable uses shall include retail, pedestrian oriented, visitor-serving commercial, public parking uses and other complementary uses (such as hotels, offices, cultural facilities, restaurants, social services, and housing).

Surrounding uses include low and high rise office buildings, surface parking lots, parking structures, restaurants and other commercial establishments. The proposed mixed use development will be consistent with existing uses in the downtown area and with the character of the area. The Commission therefore, finds that the proposed project will be consistent with applicable policies of the certified LUP and with Section 30250 of the Coastal Act.

D. Parking and Public Access

The Commission has consistently found that a direct relationship exists between the provision of adequate parking and the availability of public access to the coast. Section 30211 of the Coastal Act states that:

Development shall not interfere with the public's right of access to the sea where acquired through use of legislative authorization, including, but not limited to, the use of dry sand and rocky coastal beaches to the first line of terrestrial vegetation.

Section 30252 of the Coastal Act requires that new development should maintain and enhance public access to the coast by providing adequate parking facilities. Section 30252 of the Coastal Act states in part:

The location and amount of new development should maintain and enhance public access to the coast by. . . (4) providing adequate parking facilities or providing substitute means of serving the development with public transportation. . .

Therefore, in order to conform to the requirements of the Coastal Act, the proposed project must provide adequate support parking in order not to negatively impact parking for coastal access.

The proposed 74,940 total square foot project will include 48,078 square feet office, 7,383 square feet of retail and 4,400 square feet of restaurant (2,509 square feet of public service area), and 299 parking spaces.

Based on City parking standards of 1 space per 300 square feet for retail and office use, and 1 space per 75 square feet of restaurant space, the City requires 244 parking spaces for the proposed development. Although the City found the parking provided by the project adequate to meet City parking standards, the Commission has consistently applied Commission parking standards to development within the Santa Monica area. In the Santa Monica area, the Commission has consistently required that general retail use provide parking at a rate of 1 space per 225 square feet of gross area, 1 space per 250 square feet of general office, and 1 space per 50 square feet of service area for restaurant use. Based on the Commission's parking standards, the mixed-use project will generate a parking demand of 274 parking spaces.

The Commission has required stricter standards than the City because of the area's close proximity to coastal recreational uses and visitor-serving uses and the shortage of parking in the area. In this particular case the applicant is proposing to provide 299 parking spaces, with 87 spaces in tandem for employee parking. As proposed the parking will exceed the maximum number of spaces required by the Commission by 25 parking spaces.

In past coastal development permit action in the area the Commission has allowed attendant parking for projects to meet the Commission's parking requirements. The applicant is required by the City's permit to provide attendant parking for the employee parking. Public parking for the retail and restaurant use will not require attendant parking.

As proposed with a parking attendant, the parking will be adequate to support the proposed use. However, to ensure that the project continues to provide a parking attendant a special condition is required in order to place the applicant on notice that any change to the parking, including, but not limited to, elimination of the parking attendant service or change in hours that the parking attendant service is available, will require an amendment to this permit.

Because the proposed project site is located approximately two blocks from the Pier and the beach, traffic generated by the development could have an adverse impact on public beach

access. Impacts could be caused by increased traffic congestion that could deter the public from coming to the area, and from increased on-street parking demand from residents and visitors, employees, and customers that elect to park off-site. To mitigate potential access impacts the City's Land Use Plan Policy #16 requires that parking facilities, of commercial, office, and mixed-use developments that provide 10 or more parking spaces, shall be made available to the general public when the business is not in operation. This increases the availability of public parking and reduces the impact that projects have on beach access due to increase traffic and parking demands. Because of the projects' location, the parking supply could be a valuable reservoir of public parking, especially during the weekends and holidays, if the businesses are closed and the commercial parking spaces are not used. Therefore, it is necessary to require the commercial parking spaces to be available to the general public after business hours during regular beach parking lot hours, on the weekends and holidays. Furthermore, to ensure that the public is aware of the location and availability of the parking the applicant shall provide signage along Main Street and at the entrance to the parking garage directing the public to the parking area. The applicant shall submit a signage plan, for the review and approval of the Executive Director, showing the location, size and wording to be used.

To further mitigate access and traffic impacts, the Commission, in past coastal development permit action, has required that commercial businesses participate in a parking and transit incentive program, which encourages use in ride sharing, alternative and mass transit. To ensure that all future owners are aware of these requirements, it is necessary to require that the applicant record a deed restriction referencing all of the standard and special conditions contained in this staff report. The Commission, therefore, finds that only as conditioned will the project not adversely impact coastal access and will be consistent with Section 30211 and 30252 of the Coastal Act and with the applicable policies of the City's certified LUP.

E. Control of Polluted Runoff

Section 30230 states:

Marine resources shall be maintained, enhanced, and where feasible, restored. Special protection shall be given to areas and species of special biological or economic significance. Uses of the marine environment shall be carried out in a manner that will sustain the biological productivity of coastal waters and that will maintain healthy populations of all species of marine organisms adequate for long-term commercial, recreational, scientific, and educational purposes.

Section 30231 states:

The biological productivity and the quality of coastal waters, streams, wetlands, estuaries, and lakes appropriate to maintain optimum populations of marine organisms and for the protection of human health shall be maintained and, where feasible, restored through, among other means, minimizing adverse effects of waste water discharges and entrainment, controlling runoff, preventing depletion of ground water supplies and substantial interference with surface water flow, encouraging waste water reclamation, maintaining natural vegetation buffer areas that protect riparian habitats, and minimizing alteration of natural streams.

The proposed project poses a potential source of pollution due to contaminated runoff from the proposed parking lot and other hardscape. The City, to mitigate potential impacts, has adopted an Urban Runoff Ordinance. The ordinance requires projects to incorporate best management practices with extensive recommendations and measures to reduce or prevent contaminants from running off the site. The City requires all new development to achieve twenty-percent reduction of the projected runoff for the site and the use of oil and water separators or clarifiers to remove petroleum-based contaminants and other pollutants. Furthermore, the City has a new state-of-the-art stormwater treatment facility that treats all dry weather storm runoff. Runoff from all new development is directed to existing stormdrains, which direct stormwater to the treatment facility.

Coastal Commission water quality staff has previously reviewed the City of Santa Monica's water quality standards for similar projects and have determined that the City's standards are consistent with standards imposed by the Commission.

However, unlike previous Commission approved projects, this proposed project involves a significant amount of excavation. A potential water quality problem can result from excavation for the underground parking garage. Based on test borings, groundwater was found at depths of approximately 50 to 60 feet below grade. The proposed subterranean structure is proposed at a depth of approximately 30 feet below grade. The EIR states that groundwater would likely be encountered during excavation and will be required to be pumped. If groundwater is to be pumped during construction, the EIR states that a National Pollution Discharge Elimination System (NPDES) permit or a sanitary sewer discharge permit will be obtained from the Regional Water Quality Control Board or the Sanitary District. However, to ensure that the dewatering does not adversely impact water quality by introducing sediments or other contaminants into coastal waters, via the storm drain, a special condition is necessary requiring the applicant to provide the installation of filters on all dewatering pumps and sump pumps. Therefore, only as conditioned will the proposed project be consistent with past Commission action with regards to water quality requirements and minimize water quality impacts. To ensure that the development complies with the City requirements, a special condition is necessary that requires the applicant to agree to comply with the water quality requirements of the City. The Commission, therefore, finds that, as conditioned, the development will be consistent with Section 30230 and 30231 of the Coastal Act.

F. Cultural Resources

Section 30244 of the Coastal Act states:

Where development would adversely impact archaeological or paleontological resources as identified by the State Historic Preservation Officer, reasonable mitigation measures shall be required.

The proposed site is currently developed and has been disturbed in the past. According to the EIR, archaeological records indicate no identifiable historical, archaeological, and/or paleontological resources exist on the project site. However, one historic site has been identified within one-half mile radius of the project site. The EIR states that the development may impact unidentified prehistoric cultural remains.

In past permit actions, the Commission has required applicants to monitor all grading and construction activities and has also required appropriate recovery and mitigation measures regarding excavation, reporting and curation. To ensure that the project is consistent with past Commission action, special conditions are necessary to ensure consistency with the Coastal Act. As part of the condition, a monitoring plan shall be submitted and reviewed and approved by the Executive Director. The monitoring plan shall require that archaeological and Native American monitors be present during all grading operations, unless the applicant submits evidence that a more complete survey of cultural resources finds no cultural resources adjacent to, or within a one-half mile radius of the project site.

Once a site is determined to contain significant cultural resources, a Treatment Plan (Mitigation Plan) will be prepared and reviewed by the appropriate Federal and State reviewing agencies. The Treatment Plan will outline actions to be implemented to mitigate impacts to the cultural resources found at the site(s). To determine whether the Treatment Plan is consistent with the proposed permit or if an amendment to this permit is required, the applicant shall submit a copy of the Treatment Plan to the Commission. The Executive Director, after review of the Treatment Plan, will determine if an amendment will be required. The Executive Director will require an amendment if there is significant additional excavation required or there is a significant change in area of disturbance or change in the type of excavation procedures.

In the event that grave goods are found the Los Angeles County Coroner's Office will be notified in compliance with state law, and they in turn will request the Native American Heritage Commission to determine the cultural affiliation.

The Commission's Archaeological Guidelines also recommend that the research design include arrangements for curation of collections when appropriate, and dissemination of the research findings. Regarding curation, there must be some assurance that the collection and related field records, catalogs and reports will be properly curated. Without proper curation there is no assurance that the value of information obtained will be retained in perpetuity. A qualified curation facility is one that meets the State Historic Preservation Office (SHPO) guidelines, such as the San Bernardino County Museum. However, there is no guarantee that the facility will be able to accept the collections once the artifacts are ready for curation. Consequently, if another facility is available that meets SHPO's guidelines, it would also be appropriate to allow curation to occur there. In any case, curation of any significant artifacts must be assured in order to find that the proposed project meets Section 30244 of the Coastal Act's requirement for reasonable mitigation. Therefore, as a condition of approval, artifacts of significant cultural value collected as a result of this project at the archaeological sites shall be curated at a qualified curation facility. If no qualified curation facility is available at the time the project is complete, an amendment to this permit shall be required to determine the appropriate curation process. The Commission finds, therefore, that as conditioned, the proposed project is consistent with Section 30244 of the Coastal Act.

G. Geology

Section 30253 of the Coastal Act states in part:

New development shall:

- (1) Minimize risks to life and property in areas of high geologic, flood, and fire hazard.*
- (2) Assure stability and structural integrity, and neither create nor contribute significantly to erosion, geologic instability, or destruction of the site or surrounding area or in any way require the construction of protective devices that would substantially alter natural landforms along bluffs and cliffs.*

According to the EIR and Environmental Assessment Report prepared by the applicant's consulting Geotechnical engineer, the project site is located over the Lakewood Formation. The Lakewood formation consists of terraces and old dune deposits made up of gravel, sand, silty sand, silt, and clay and have a uniform thickness of approximately 200-300 feet throughout the City.

The report states that there are no known faults in the area. The closest fault, the south branch of the Santa Monica fault is approximately 7,000 feet to the north. According to the report the potential of ground rupture from fault displacement is considered very low due the distance of the fault from the project site. Furthermore, the site is located outside of the liquefaction zone, based on the "Seismic Hazard Zones" map issued by the State of California. According to the EIR, the project site is considered as having medium susceptibility to liquefaction, due to a combination of underlying alluvial soils, ground water levels, and the potential for strong ground shaking.

The report concludes that development of the site is feasible from a geotechnical engineering viewpoint provided their recommendations are incorporated into the design. Recommendations include foundation design and construction. To ensure that the recommendations made by the consultants are implemented, the applicant shall submit plans reviewed and approved by their geotechnical consultants indicating that all recommendations have been incorporated into the design. The Commission, therefore, finds that only as conditioned will the proposed development be consistent with Section 30253 of the Coastal Act and the certified LUP.

H. Local Coastal Program

- (a) Prior to certification of the Local Coastal Program, a Coastal Development Permit shall be issued if the issuing agency, or the Commission on appeal, finds that the proposed development is in conformity with the provisions of Chapter 3 (commencing with Section 30200) of this division and that the permitted development will not prejudice the ability of the local government to prepare a Local Coastal Program that is in conformity with the provisions of Chapter 3.*

In August 1992, the Commission certified, with suggested modifications, the land use plan portion of the City of Santa Monica's Local Coastal Program, excluding the area west of Ocean Avenue and Neilson Way (Beach Overlay District), the Santa Monica Pier and the Civic Center. On September 15, 1992, the City of Santa Monica accepted the LUP with suggested modifications.

As conditioned, the project will not adversely impact coastal resources and beach access. The Commission, therefore, finds that the proposed project will be consistent with the Chapter 3 policies of the Coastal Act and will not prejudice the ability of the City to prepare a Local Coastal Program consistent with the policies of Chapter 3 of the Coastal Act as required by Section 30604(a).

I. CEQA

Section 13096 of the Commission's regulations requires Commission approval of Coastal Development Permit applications to be supported by a finding showing the application, as conditioned by any conditions of approval, to be consistent with any applicable requirements of the California Environmental Quality Act (CEQA). Section 21080.5(d)(2)(i) of CEQA prohibits a proposed development from being approved if there are feasible alternatives or feasible mitigation measures available, which would substantially lessen any significant adverse impact, which the activity may have on the environment.

As proposed there are negative impacts caused by the proposed development which have not been adequately mitigated. The negative impacts caused by the proposed development involve impacts to scenic coastal resources. An alternative to the proposed project, that will reduce the visual impacts caused by the project, is to redesign the project to reduce the height of the development below the sightline from the viewing areas. The redesign is feasible through the redesign of the roofline and relocation or modification to the elevator towers. The redesign may require a reduction in the proposed square footage, but the alternative will continue to allow the applicant to develop the site with an economically feasible development. Therefore, the proposed project has been conditioned to minimize those impacts by limiting the height of the development to a height that will not interfere with the views from the adjacent viewing platform. Therefore, the proposed project, only as condition, is consistent with CEQA and the policies of the Coastal Act.

APPENDIX 1**CULTURAL RESOURCES SIGNIFICANCE TESTING PLAN PROCEDURES**

A. An applicant seeking to recommence construction following discovery of the cultural deposits shall submit a Significance Testing Plan for the review and approval of the Executive Director. The Significance Testing Plan shall identify the testing measures that will be undertaken to determine whether the cultural deposits are significant. The Significance Testing Plan shall be prepared by the project archaeologist(s), in consultation with the Native American monitor(s), and the Most Likely Descendent (MLD) when State Law mandates identification of a MLD. The Executive Director shall make a determination regarding the adequacy of the Significance Testing Plan within 10 working days of receipt. If the Executive Director does not make such a determination within the prescribed time, the plan shall be deemed approved and implementation may proceed.

1. If the Executive Director approves the Significance Testing Plan and determines that the Significance Testing Plan's recommended testing measures are de minimis in nature and scope, the significance testing may commence after the Executive Director informs the permittee of that determination.
2. If the Executive Director approves the Significance Testing Plan but determines that the changes therein are not de minimis, significance testing may not recommence until after an amendment to this permit is approved by the Commission.
3. Once the measures identified in the significance testing plan are undertaken, the permittee shall submit the results of the testing to the Executive Director for review and approval. The results shall be accompanied by the project archeologist's recommendation as to whether the findings are significant. The project archeologist's recommendation shall be made in consultation with the Native American monitors and the MLD when State Law mandates identification of a MLD. The Executive Director shall make the determination as to whether the deposits are significant based on the information available to the Executive Director. If the deposits are found to be significant, the permittee shall prepare and submit to the Executive Director a supplementary Archeological Plan in accordance with subsection D of this condition and all other relevant subsections. If the deposits are found to be not significant, then the permittee may recommence grading in accordance with any measures outlined in the significance testing program.

B. An applicant seeking to recommence construction following a determination by the Executive Director that the cultural deposits discovered are significant shall submit a supplementary Archeological Plan for the review and approval of the Executive Director. The supplementary Archeological Plan shall be prepared by the project archaeologist(s), in consultation with the Native American monitor(s), the Most Likely Descendent (MLD) when State Law mandates identification of a MLD, as well as others identified in subsection E of this condition. The supplementary Archeological Plan shall identify proposed investigation and mitigation measures. The range of investigation and mitigation

measures considered shall not be constrained by the approved development plan. Mitigation measures considered may range from in-situ preservation to recovery and/or relocation. A good faith effort shall be made to avoid impacts to cultural resources through methods such as, but not limited to, project redesign, capping, and placing cultural resource areas in open space. In order to protect cultural resources, any further development may only be undertaken consistent with the provisions of the Supplementary Archaeological Plan.

1. If the Executive Director approves the Supplementary Archaeological Plan and determines that the Supplementary Archaeological Plan's recommended changes to the proposed development or mitigation measures are de minimis in nature and scope, construction may recommence after the Executive Director informs the permittee of that determination.

2. If the Executive Director approves the Supplementary Archaeological Plan but determines that the changes therein are not de minimis, construction may not recommence until after an amendment to this permit is approved by the Commission.

C. Prior to submittal to the Executive Director, all plans required to be submitted pursuant to this special condition, except the Significance Testing Plan, shall have received review and written comment by a peer review committee convened in accordance with current professional practice that shall include qualified archeologists and representatives of Native American groups with documented ancestral ties to the area. Names and qualifications of selected peer reviewers shall be submitted for review and approval by the Executive Director. The plans submitted to the Executive Director shall incorporate the recommendations of the peer review committee. Furthermore, upon completion of the peer review process, all plans shall be submitted to the California Office of Historic Preservation (OHP) and the NAHC for their review and an opportunity to comment. The plans submitted to the Executive Director shall incorporate the recommendations of the OHP and NAHC. If the OHP and/or NAHC do not respond within 30 days of their receipt of the plan, the requirement under this permit for that entities' review and comment shall expire, unless the Executive Director extends said deadline for good cause. All plans shall be submitted for the review and approval of the Executive Director.
