## RECORD PACKET COPY

### STAFF REPORT: REGULAR CALENDAR

**APPLICATION NUMBER:** 5-04-446

**APPLICANT:** Archdiocese of Los Angeles

**AGENTS:** Marc Danziger, Michael Davitt, Charlene Dekker, Ron Hirsch, Susan McCabe, Brady McShane, George Muhlstein, Rhonda Meister, Michael Nytzen, Charles Oltman, Jose Palacios, Eric Strecker, Kathleen Truman, Cara Vallier, Rick Zbur

**PROJECT LOCATION:** 3007 Second Street and 3114 Third Street, Santa Monica, Los Angeles County

**PROJECT DESCRIPTION:** Demolition, repaving, reconfiguration and re-landscaping two existing parking lots, installation of lighting, drainage swales catch basin system, retaining walls, and fencing. Applicant proposes to continue to provide public parking in the lower lot at 3007 Second Street, (either by offering parking for a fee to the general public, or by leasing spaces periodically to offsite uses) subject to availability. This project and the project authorized in A5-VEN-04-315, together may export up to 1500 cubic yards of fill found unsuitable for re-use on site; export up to 280 cubic yards of asphalt, and import up to 800 yards of fill.

### SUMMARY OF STAFF RECOMMENDATION:

This project is related to the construction of a new building for the St. Joseph Center described in appeal A-5-VEN-04-315. Because these two parking lots (3007 Second St., known as the lower lot and 3114 Third St., known as the church lot) are located in Santa Monica, the reconfiguration of these parking lots that is part of the proposal to rebuild the St. Joseph Center community center was not authorized in the City of Los Angeles coastal development permit for that project, and therefore not subject to the appeal to the Commission. Instead, the applicant sought approval from the City of Santa Monica for the necessary work on these parking lots, while agreeing to parking lot management conditions that include the Santa Monica lots imposed by the City of Los Angeles. The Staff is recommending approval with special conditions that are identical to those recommended for the St. Joseph Center project A-5-VEN-04-315, which require that the applicant(s)/ owners of each parking lot in the Campus manage the lot to serve the entire Campus, and for the owners of the individual structures to manage the uses on each site consistent with the amount of parking found on the site. Further, to assure that the parking demand remains consistent with that provided to the Commission in this application; the staff recommends that the Commission impose a special condition

requiring that any change in use of any of the structures would require an amendment to the CDP. Consistent with the City of Los Angeles' requirement for a resurvey of the parking situation, the Commission requires the applicant provide the Executive Director with copies of the two reports (and City's final action) concerning post-occupancy re-examination of conditions in the neighborhood and operation of the project and compliance with the City conditions of approval with regard to parking. If the study indicates that parking lot utilization due to the project is greater than anticipated, the applicant shall apply for an amendment to this permit. The staff recommends that the applicants of this and related permit A5-VEN-04-315 record a deed restriction on each parcel on the Campus indicating that the conditions of this permit shall apply as long as the development subject to this permit remains in place. Other recommended conditions address changes of use, future development, special events, landscaping, the provision of final plans, water quality, and geologic stability. Please note that the exhibits for this action and A5-VEN-04 315 are combined and are attached to the staff report A5-VEN-04 315.

#### **LOCAL APPROVALS RECEIVED:**

1. City of Santa Monica, Architectural Review Board, ARB-04-ARB-530, Reconfiguration and Landscaping two parking lots located at 3007 Second Street and 3114 Third Street, Santa Monica.

#### **SUBSTANTIVE FILE DOCUMENTS:**

1. City of Santa Monica certified Land Use Plan
2. City of Los Angeles Local Coastal Development Permit No. APCW2003-3304.

**STAFF RECOMMENDATION:**

**MOTION 1:** *I move that the Commission approve Coastal Development Permit No 5-04-446 pursuant to the staff recommendation.*

**STAFF RECOMMENDATION OF APPROVAL:**

Staff recommends a **YES** vote. Passage of this motion will result in approval of the permit as conditioned and adoption of the following resolution and findings. The motion passes only by affirmative vote of a majority of the Commissioners present.

**RESOLUTION TO APPROVE THE PERMIT:**

The Commission hereby approves a coastal development permit for the proposed development and adopts the findings set forth below on grounds that the development as conditioned will be in conformity with the policies of Chapter 3 of the Coastal Act and will not prejudice the ability of the local government having jurisdiction over the area to prepare a Local Coastal Program conforming to the provisions of Chapter 3. Approval of the permit complies with the California Environmental Quality Act because either 1) feasible mitigation measures and/or alternatives have been incorporated to substantially lessen any significant adverse effects of the development on the environment, or 2) there are no further feasible mitigation measures or alternatives that would substantially lessen any significant adverse impacts of the development on the environment.

**II. STANDARD CONDITIONS:**

1. Notice of Receipt and Acknowledgment. The permit is not valid and development shall not commence until a copy of the permit, signed by the permittee or authorized agent, acknowledging receipt of the permit and acceptance of the terms and conditions, is returned to the Commission office.
2. Expiration. If development has not commenced, the permit will expire two years from the date this permit is reported to the Commission. Development shall be

pursued in a diligent manner and completed in a reasonable period of time. Application for extension of the permit must be made prior to the expiration date.

3. Interpretation. Any questions of intent or interpretation of any condition will be resolved by the Executive Director or the Commission.
4. Assignment. The permit may be assigned to any qualified person, provided assignee files with the Commission an affidavit accepting all terms and conditions of the permit.
5. Terms and Conditions Run with the Land. These terms and conditions shall be perpetual, and it is the intention of the Commission and the permittee to bind all future owners and possessors of the subject property to the terms and conditions.

### III. SPECIAL CONDITIONS

#### III. SPECIAL CONDITIONS:

##### 1. Relationship to Conditions and Mitigation Measures Imposed by the Cities of Los Angeles and Santa Monica

1. In the event of conflict between the conditions imposed by the Cities of Los Angeles, Santa Monica and the Commission, the terms and Conditions imposed by the Commission shall prevail. Pursuant to this, **PRIOR TO ISSUANCE OF THE COASTAL DEVELOPMENT PERMIT**, the applicant shall prepare and submit a written comparison of the Coastal Commission's Conditions with the conditions imposed by both cities, subject to the review and approval of the Executive Director.
2. Nothing in this action is intended to nor does change any action taken by the local government except as explicitly stated herein. Thus,
  - A. Except as explicitly modified by the terms of this coastal development permit, all conditions imposed on the development by the City Council of the City of Los Angeles in connection with its action on Case number APCW 2003-3304-SPE-CU-CDP-ZAD-SPP, and any and all mitigation measures imposed in connection with Mitigated Negative Declaration No. ENV-2003-3305-MND as approved by the City of Los Angeles on June 22, 2004, remain binding and enforceable by the City to the extent they would have been had the Coastal Commission not found the appeal to raise a substantial issue.
  - B. Except as explicitly modified by the terms of this coastal development permit, all conditions imposed on the development by the City of Santa Monica, Architectural Review Board, in connection with its approval of the reconfiguration and landscaping of the parking lots located at 3007 Second Street and 3114 Third Street (ARB-04-ARB-530) remain binding and enforceable by the City to the extent they would have been had the Coastal Commission not acted on coastal development permit 5-04-446.

3. Revisions to the above-described local approvals shall be reported to the Executive Director of the Commission before the revision is implemented to determine whether such revisions constitute a change to the project as approved by the Commission. The Executive Director shall determine whether the proposed change is consistent with these coastal development permits. If the change is inconsistent with either of coastal development permit A-5-VEN-04-315 or 5-04-446, the Executive Director shall determine whether an amendment to one or both of these coastal development permits is required and also whether an amendment request can be accepted according to the requirements of Section 13166 of the California Code of Regulations.

2. **Right to Use Parking Lots.**

**A. PRIOR TO ISSUANCE OF THE COASTAL DEVELOPMENT PERMIT, THE APPLICANT SHALL SUBMIT FOR THE REVIEW AND APPROVAL OF THE EXECUTIVE DIRECTOR** evidence that the owners/operators of the St. Joseph's Center have the right to use the parking spaces on each lot identified on the Campus parking study submitted by Crain & Associates dated December 12, 2003, including the two spaces located in the Rectory, the lower lot at 3007 Second Street, the upper lot /Church lot at 3114 Third Street and the lot on Third Street behind the St. Joseph Center. For purposes of the Commission action the "Campus" includes all lots identified on Exhibits 6 and 7 of this report. The evidence shall demonstrate that the owners, employees, occupants, students and visitors to the structures identified as Convent/Catholic Charities, the St. Joseph's Center, the St. Clement Rectory, and St. Clement Church may use all parking spaces on each lot. The evidence shall also include the legal description of each parcel and each legal lot on the 12-acre Campus, including the lots occupied by each of the structures listed in this condition, and by each parking lot listed above. The applicant shall also provide proof of ownership of each of the legal lots on the Campus and either evidence of an easement over all parking lots or a written agreement authorizing use of all parking lots the owners, employees, occupants, students and visitors to the structures identified as Convent/Catholic Charities, the St. Joseph's Center, the St. Clement Rectory, and St. Clement Church. If written agreements are provided, the applicant shall provide evidence that the signatory is authorized to enter into an agreement on behalf of the legal owner.

**B.** The permittee shall undertake development in accordance with the approved final agreements. Any proposed changes to the approved final agreements shall be reported to the Executive Director. No changes to the approved final agreements shall occur without a Commission amendment to this coastal development permit unless the Executive Director determines that no amendment is required.

**3. Monitoring use of parking**

**A.** By acceptance of this permit, the applicant agrees to provide the Executive Director with copies of the two reports submitted to the City of Los Angeles pursuant to Condition 8 of the City's Case number APCW 2003-3304-SPE-CU-CDP-ZAD-SPP, and the City's review of both reports within 15 days of receipt of the City's review. If the Executive Director determines that parking demand, as shown in the report, exceeds that anticipated in the Crain & Associates report of December 12, 2003, the applicant shall apply for an amendment to this permit.

**4. Parking Management Plan.**

**A. PRIOR TO ISSUANCE OF THE COASTAL DEVELOPMENT PERMIT,** the applicant shall submit for the review and approval of the Executive Director, a parking management plan for the management of its work schedules, hours of operation, and of all 134 parking spaces on Campus as shown in Exhibit 66 and outlined in the parking analysis found in the Crain & Associates report of December 12, 2003 as amended by the applicant's revised plan of December 15, 2004 (Exhibit 66). The applicants and owners of each use or structure on the Campus shall share the parking pursuant to Special Condition 1, above, and shall manage the development/activities on the 12-acre site such that all parking generated by daily and weekly activities described in this application, including Saturday and Sunday activities, can be accommodated within the 134 spaces in the parking lots identified Exhibit 66. Methods of management shall include validation for the use of the spaces in the lower lot by owners, employees, occupants, students and visitors to the structures identified as Convent/Catholic Charities, the St. Joseph's Center, the St. Clement Rectory, and St. Clement Church, and designation of no fewer than 10 drop off/short term spaces in the various lots.

**B.** The permittee shall undertake development in accordance with the approved final plans. Any proposed changes to the approved final plans shall be reported to the Executive Director. No changes to the approved final plans shall occur without a Commission amendment to this coastal development permit unless the Executive Director determines that no amendment is required.

**5. No Change of Use**

This project is approved as two parking lots affiliated with a non-profit service center, the church, rectory and Catholic Charities offices (former convent) on the same Campus, proposed for specific, limited charitable uses: counseling, instruction, operation of a nursery school and the distribution of food, as described in the City of Los Angeles approval APCW 2003-3304-SPE-CU-CDP-ZAD-SPP. Any change in use shall be reported to the Executive Director to determine whether an amendment to this permit or a new permit is required. If the Executive Director

determines that an amendment to this permit is necessary, the change may not be undertaken until the Commission approves a permit amendment, or new permit.

## 6. Water Quality.

**A. PRIOR TO ISSUANCE OF THE COASTAL DEVELOPMENT PERMIT**, the applicant shall submit for the review and approval of the Executive Director, two (2) copies of a Final Water Quality Management Plan (WQMP) for the post-construction project site, prepared by a licensed water quality professional, and shall include plans, descriptions, and supporting calculations. The WQMP shall incorporate structural and non-structural Best Management Practices (BMPs) designed to reduce, to the maximum extent practicable, the volume, velocity and pollutant load of stormwater and dry weather flows leaving the developed site. In addition to the specifications above, the plan shall be in substantial conformance with the following requirements:

### (1) Water Quality Goals

- (a) Post-development peak runoff rates and average volumes shall not exceed pre-development conditions.
- (b) Appropriate structural and non-structural BMPs shall be designed to treat, infiltrate, or filter the runoff from all surfaces and activities on the development site;
- (c) Post-construction structural BMPs (or suites of BMPs) shall be designed to treat, infiltrate or filter the amount of stormwater runoff produced by all storms up to and including the 85th percentile, 24-hour storm event for volume-based BMPs, and/or the 85th percentile, 1-hour storm event, with an appropriate safety factor (i.e., 2 or greater), for flow-based BMPs;

### (2) Runoff controls.

- (a) Runoff from all roofs and parking areas shall be collected and directed through a system of structural BMPs including vegetated areas and/or gravel filter strips or other vegetated or media filter devices. Vegetated landscaped areas shall only consist of plants that are not invasive as defined by the Santa Monica Mountains chapter of the California Native Plant Society as described in Special Condition 11. The filter elements shall be designed to 1) trap sediment, particulates and other solids and 2) remove or mitigate contaminants through infiltration and/or biological uptake. The drainage system shall also be designed to convey and discharge runoff in excess of this standard from the building site in a non-erosive manner.
- (b) At minimum this must include a bioswale and/or filter designed specifically to minimize vehicular contaminants (oil, grease,

- automotive fluids, heavy metals, hydrocarbons), sediments, and floatables and particulate debris.
- (c) The applicant shall regularly sweep the parking lot at a minimum on a weekly basis, in order to prevent dispersal of pollutants that might collect on those surfaces.
  - (d) Consistent with Condition 15 of the Conditional Use Permit, the applicant shall clean up the public rights-of-way within one block of the center once per day when the center is open to clients. Debris and other materials shall not be disposed of in the storm drain system.
  - (e) The detergents and cleaning components used on site shall comply with the following criteria: they shall be phosphate-free, biodegradable, and non-toxic to marine wildlife; amounts used shall be minimized to the maximum extent practicable; no fluids containing ammonia, sodium hypochlorite, chlorinated solvents, petroleum distillates, or lye shall be used;
  - (f) The applicant shall not spray down or wash down the parking lot unless the water used is directed through the sanitary sewer system or a filtered drain.
  - (g) All BMPs shall be operated, monitored, and maintained for the life of the project and at a minimum, all structural BMPs shall be inspected, cleaned-out, and where necessary, repaired at the following minimum frequencies: (1) prior to October 15th each year; (2) during each month between October 15<sup>th</sup> and April 15<sup>th</sup> of each year and, (3) at least twice during the dry season.
  - (h) Debris and other water pollutants removed from structural BMP(s) during clean-out shall be contained and disposed of in a proper manner;
  - (i) It is the applicant's responsibility to maintain the drainage system and the associated structures and BMPs according to manufacturer's specifications.

(3) Cooking school, food pantry, trash, and other materials<sup>1</sup>.

The applicant shall install grease traps and debris control to reduce runoff and other discharges from the cooking school and food distribution. As part of this the applicant shall provide a plan for managing waste from the kitchen and food distribution areas that shall include:

- (a) Covering waste
- (b) Recycle/compost plant waste
- (c) Grease traps shall not discharge to the sewer
- (d) Instruct trainees on water quality issues.

---

<sup>1</sup> Included for informational purposes only: the cooking school is located in Venice.

- (e) Avoid use of toxic substances that are persistent in the water supply to control pests
  - (f) Interior and exterior wash down areas shall not discharge to the storm drain, or parking lot.
  - (g) All containers shall be designed to resist scavenging animals.
- (4) The permittee shall undertake development in accordance with the approved final plans. Any proposed changes to the approved final plans shall be reported to the Executive Director. No changes to the approved final plans shall occur without a Commission amendment to this coastal development permit unless the Executive Director determines that no amendment is required.

**7. Demolition, Grading, Drainage, and Erosion and Siltation Control Plan: During Construction**

**A. PRIOR TO ISSUANCE OF THE PERMIT, THE APPLICANT SHALL PROVIDE PLANS FOR THE REVIEW AND APPROVAL OF THE EXECUTIVE DIRECTOR**

for control of the discharge of waste sediments, debris, dusts and pollutants during demolition of the existing structure and site preparation for the review and approval of the Executive Director. The plans shall include the following information:

- (a) Property limits, prior-to-grading contours, and details of terrain and area drainage.
- (b) Location of all staging and stockpiling areas;
- (c) Measures to control dust and debris during demolition
- (d) Locations and cross sections of all proposed retaining structures and temporary and permanent cut-and-fill slopes, that will result in an alteration to existing site topography (identify benches, surface/subsurface drainage, etc.);
- (e) Area (square feet) and volume (cubic yards) of all grading (identify cut, fill, import, export volumes separately), and the locations where sediment will be stockpiled or disposed of.
- (f) Elevation of finish contours to be achieved by the grading, and related construction.
- (g) A drainage plan
- (h) A grading schedule.
- (i) Proposed erosion and sediment prevention and control BMPs, both structural and non-structural, for implementation during construction. These plans shall be prepared by a professional engineer and shall be designed to minimize discharge of sediments, debris and pollutants from the construction site.

**B.** The permittee shall undertake development in accordance with the approved final plans. Any proposed changes to the approved final plans shall be reported to the Executive Director. No changes to the approved final plans shall occur without a Commission amendment to this coastal development permit unless the Executive Director determines that no amendment is required.

**8. Staging Areas for Construction**

**A. PRIOR TO ISSUANCE OF THE COASTAL DEVELOPMENT PERMIT,** the permittee shall submit a plan for the review and approval of the Executive Director which indicates that the construction staging area(s) and construction corridor(s) will preserve recreational access to the beach and minimize disruption of coastal access corridors and Venice pedestrian routes.

- (1) The plan shall demonstrate that:
  - (a) Construction equipment or activity shall not occur outside the staging area and construction corridor identified on the site plan required by this condition
- (2) The plan shall include, at a minimum, the following components:
  - (a) A site plan that depicts:
  - (b) limits of the staging area(s)
  - (c) construction corridor(s)
  - (d) construction site
  - (e) location of construction fencing and temporary job trailers
  - (f) location of stockpiles
- (3) Required permits and authorization, which shall include:
  - (a) Authority for Use of Staging Area
  - (b) Written documentation from the owner of the staging area site that the permittee is authorized to use the site, as conditioned by the Coastal Commission, for the period the project is under construction and needed to complete post construction restoration work.
  - (c) Permission from applicable local government, and a copy of all conditions imposed by the local government.
- (4) The applicant shall not use coastal access routes as haul routes on weekends between the weekend before Memorial Day and Labor Day or on any other holiday. Rose Avenue, Lincoln Boulevard, and Main St. are considered coastal access routes.

**B.** The permittee shall undertake development in accordance with the approved final plans. Any proposed changes to the approved final plans shall be reported to the Executive Director. No changes to the approved final plans shall occur without

a Commission amendment to this coastal development permit unless the Executive Director determines that no amendment is legally required.

**9. Special Events**

**A. PRIOR TO ISSUANCE OF THE PERMIT, THE APPLICANT SHALL SUBMIT FOR THE REVIEW AND APPROVAL OF THE EXECUTIVE DIRECTOR** a plan for management of parking and access during special events. Special events are events outside the list of activities included in the applicant's shared parking plan (Crain & Associates, December 2003), are infrequent and that are expected to generate higher than normal use of the parking lots.

(1) The plan shall include:

- (a) A description of the kind of event and number of expected attendees that should warrant special handling
- (b) A list of measures that will be taken to reduce (i) local congestion and (ii) impacts to beach access of any such event. Such measures may include valet parking, identification of remote parking site and the use of jitneys to pick up and deliver attendees.

(2) Pursuant to these requirements:

- (a) No daytime event on summer weekends or holidays, including Labor Day and Memorial Day may use the Santa Monica State Beach lots for remote or valet parking.
- (b) No event that requires parking management may take place on the Fourth of July, Memorial Day or Labor Day weekends.

**B.** The permittee shall undertake development in accordance with the approved final plans. Any proposed changes to the approved final plans shall be reported to the Executive Director. No changes to the approved final plans shall occur without a Commission amendment to this coastal development permit unless the Executive Director determines that no amendment is required.

**10. Conformance of Design and Construction Plans to Geotechnical Report.**

**A.** Prior to issuance of the coastal development permit the applicant shall submit final design and construction plans, including foundations, grading and drainage plans. All final design and construction plans, shall be consistent with all recommendations contained in the preliminary Geologic Investigation prepared by Gregory K. Mitchell, and John A. Seminara, Southern California Geotechnical, Project No. 02F288-1, "Geotechnical Investigation, Proposed St. Joseph Center, 204 Hampton Drive, Venice, (Los Angeles), California, October, 28, 2002. **PRIOR TO THE ISSUANCE OF THE COASTAL DEVELOPMENT PERMIT**, the applicant shall submit, for the Executive Director's review and approval, written evidence that:

- (1) The Grading Division of the City of Los Angeles Department of Building and Safety and the City of Santa Monica Department of Building and Safety or its consultant have each reviewed and approved all final reports and design, grading and construction plans; and
- (2) that an appropriate licensed professional has reviewed and approved all final design and construction plans and certified that each of those final plans is consistent with all of the recommendations specified in the above-referenced geologic evaluation approved by the California Coastal Commission for the project site.

**B.** Any significant changes in design from that described in the above mentioned reports shall be reported to the Executive Director to determine whether an amendment to this permit is required.

**C.** The permittee shall undertake development in accordance with the approved final plans. Any proposed changes to the approved final plans shall be reported to the Executive Director. No changes to the approved final plans shall occur without a Commission amendment to this coastal development permit unless the Executive Director determines that no amendment is legally required.

## **11. Final Landscaping Plans**

**A. PRIOR TO ISSUANCE OF THE COASTAL DEVELOPMENT PERMIT**, the applicants shall submit, for the review and written approval of the Executive Director, a final landscaping plan. The landscaping plan shall conform with the following requirements: (a) With the exception of plants located in vegetated swales or other runoff collection areas, all plants shall be low water use plants as defined by the University of California Cooperative Extension and the California Department of Water Resources in their joint publication: "*Guide to estimating irrigation water needs of landscape plantings in California*". (b) The applicant shall not employ invasive, non-indigenous plant species, which tend to supplant native species as identified on the California Native Plant Society publication "California Native Plant Society, Los Angeles -- Santa Monica Mountains Chapter handbook entitled *Recommended List of Native Plants for Landscaping in the Santa Monica Mountains*, January 20, 1992 " and/or by the California Exotic Pest Council. (c) Use of California native plants indigenous to the Santa Monica Mountains is encouraged. (d) All required plantings shall be maintained in good growing condition throughout the life of the project, and whenever necessary, shall be replaced with new plant materials to ensure continued compliance with the landscape plan. 2. The plan shall include, at a minimum, the following components:

- (1) A map showing the type, size, and location of all plant materials that will be on the developed site, topography of the developed site, and all other landscape features,
- (2) A list of proposed species including the common and scientific name.

**B.** The permittee shall undertake development in accordance with the approved final plan. Any proposed changes to the approved final plan shall be reported to the Executive Director. No changes to the approved final plan shall occur without a Commission amendment to this coastal development permit unless the Executive Director determines that no amendment is required.

**12. Future Development Restriction**

**A.** This permit is only for the development described in coastal development permits No. A-5-VEN-04-315 and 5-04-446. Pursuant to Title 14 California Code of Regulations section 13250, the exemptions otherwise provided in Public Resources Code Section 30610(b) shall not apply to the development governed by coastal development permits No. A-5-VEN-04-315 and 5-04-446. Accordingly, any future improvements to the parking lots and community center authorized by these permit, including but not limited to repair and maintenance identified as requiring a permit in Public Resources section 30610(d) and Title 14 California Code of Regulations sections 13252(a)-(b), shall require an amendment to Permit No. A-5-VEN-04-315 from the Commission or shall require an additional coastal development permit from the Commission or from the applicable certified local government.

**13. Revised Final Plans**

**A. PRIOR TO ISSUANCE OF THE COASTAL DEVELOPMENT PERMIT,** the applicants shall submit, for the review and written approval of the Executive Director, final plans for the St. Joseph Center consistent with the above conditions, and otherwise consistent with the plans dated June 2, 2004 by DMJM submitted to the Commission offices, and final plans for the parking lots consistent with the above conditions and otherwise consistent with the plans dated October 5, 2004 by DMJM, approved by the City of Santa Monica. The plans shall include scales and dimensions of all exterior walls, including the length of each, measurements of height and of setbacks, and legible counts of all parking spaces.

**B.** The permittee shall undertake development in accordance with the approved final plans. Any proposed changes to the approved final plan shall be reported to the Executive Director. No changes to the approved final plan shall occur without a Commission amendment to this coastal development permit unless the Executive Director determines that no amendment is required.

**14. Deed Restriction**

**PRIOR TO ISSUANCE OF THE COASTAL DEVELOPMENT PERMIT,** the applicants and landowners of each lot in the Campus shall submit to the Executive Director for review and approval documentation demonstrating that the applicant(s)/ landowner(s) have executed and recorded a deed restriction against the all legal lots located on the Campus, in a form and content acceptable to the Executive Director: (1) indicating that, pursuant to this permit, the California Coastal

Commission has authorized development on the subject properties, subject to terms and conditions that restrict the use and enjoyment of that property; and (2) imposing the Special Conditions of this permit as covenants, conditions and restrictions on the use and enjoyment of the Property. The deed restriction shall include a legal description of the entire parcel or parcels governed by this permit. The deed restriction shall also indicate that, in the event of an extinguishment or termination of the deed restriction for any reason, the terms and conditions of this permit shall continue to restrict the use and enjoyment of the subject property so long as either this permit or the development it authorizes, or any part, modification, or amendment thereof, remains in existence on or with respect to the subject property.

#### **IV. FINDINGS AND DECLARATIONS:**

The Commission hereby finds and declares:

##### **A. Project and Area Description**

The applicant proposes to demolish two parking lots, a 58 space lot and an interconnected 28 space lot that serve a church and a 10,674 square foot parish school building now used as a community service center. As part of the related proposal (see A-5-VEN-315) the applicant proposes to replace a former parish school building with a new 29,086 square foot community service center institutional building, and demolish all four parking lots on the Campus, resulting in reconfiguration of the 136 shared and private parking spaces to provide a total of 134 parking space. A 19-space parking lot and a 23-space parking lot are located in the City of Los Angeles and are subject to the related permit; the two parking lots subject to this coastal development permit are located in the City of Santa Monica. The improvements to all the parking lots were considered by the City of Los Angeles in evaluating the expanded community center, but since these two parking lots are located in the City of Santa Monica, reconfiguring the parking lots requires approval from the City of Santa Monica as well as a coastal development permit from the Coastal Commission.

The project is located on a church campus that is located both in the Ocean Park District of City of Santa Monica and in the Oakwood Planning Area of Venice ("Campus"). The Campus includes 17 lots bounded on the north by Marine St., on the west by Second Street/Hampton Drive<sup>2</sup>, on the east by Third St. and on the south by private development (See Exhibits 3, 4 and 5). The eight lots in the City of Los Angeles are located along Hampton Drive, and on the southwest side of Third Street. The St. Joseph Center structure and a former convent are owned by a nonprofit agency of the Archdiocese of Los Angeles, the Archdiocese of Los Angeles Education and Welfare Corporation; the "Third Street parking lot" with 17 parking spaces and a small shrine, is owned by the Archdiocese of Los Angeles (Exhibits 6 and 7). The adjacent nine lots (three parcels) in the City of

---

<sup>2</sup> The same street is called Hampton Drive in Venice and Second Street in Santa Monica.

Santa Monica<sup>3</sup> are owned by the Archdiocese of Los Angeles and are occupied by the church, the rectory, and most of the parking, currently 86 spaces, 58 of which are in a large lot at 3007 Second Street. The Archdiocese Education and Welfare Corporation and the "Archdiocese" are legally distinct entities, with different management. Both are entities within the Los Angeles Archdiocese. An official of the Archdiocese signed the City application for this development. The 10,674 sq. ft. building that is to be demolished extends over five lots and fronts Hampton Drive. The existing building, originally built as a parish school, is currently used for the operation of the St. Joseph Center Food Pantry and Counseling Services as well as offices and meeting rooms which are used by both the church and the St. Joseph Center. In addition to parking lots, other existing uses in the Campus include St. Cement Catholic Church, the St. Clement rectory, and a convent, which is now used to house the Catholic Charities offices (Exhibit 4).

Two of the three parking lots on the Campus are located in the City of Santa Monica and are subject to this application 5-04-446. The lots are zoned OP2, which is a medium density residential zone, which allows community centers, churches and "underground parking" as a conditional use, although it would not allow a commercial parking lot that is unrelated to a permitted use. The parking lots are currently developed and used as a parking lot for the uses on the Campus. The owner, the Archdiocese of Los Angeles, also leases 58 spaces of the lot at 3007 Second Street, Santa Monica to an operator who manages the lot for commercial parking. The current proposal includes reconfiguring the existing parking lots on the property to increase efficiency, reconfiguring and re-landscaping the "lower lot", the lot located at 2007 Second from 58 to 72 spaces; enlarging an existing lot and driveway adjacent to St. Clement Church (located at 3114 Third Street Santa Monica) from 28 spaces to 34 spaces; and reconfiguring a 24-space lot located between St. Joseph Center and Third Street that is located in Los Angeles to accommodate 25 spaces. Changes include removal of one curb cut now located on Marine Street (Santa Monica), removal of a driveway that connects the upper and lower lots, and removal of the 23 parking spaces that are located in the proposed building footprint. After reconfiguration, the total number of spaces on the Campus will decrease to from 136 to 134 spaces, but the new parking plan will manage the spaces together for more efficient use, for example they will include ten drop off spaces and allow employees and visitors to the St. Joseph Center to obtain validation from the commercial lot operator.<sup>4</sup>

The 10,674 sq. ft. building that is to be demolished in related permit A5-VEN-04-3i5 is adjacent to the lower lot and fronts Hampton Drive. The existing St. Joseph Center originally built as a parish school, is currently used for the operation of the St. Joseph Center Food Pantry and Counseling Services as well as offices and meeting rooms which

---

<sup>3</sup> The 9 lots in Santa Monica include a parcel for the rectory, parcel 11 accomplished by a lot split of two underlying lots. The Commission, by noting this lot, has not investigated the creation of this parcel 11 or concurred that this is a legally created lot.

<sup>4</sup> The applicant has provided several different counts of the parking spaces at 3007 Second Street – the survey showed 57 spaces and the parking study showed 58 spaces. At a site visit on December 9, 2004, staff counted 58 marked spaces on the lot at 3007 Second Street. A booth occupied one of the spaces, and a second space was occupied by the attendant's car. However two cars were parked at the ends of rows outside marked spaces.

are used by both the church and the St. Joseph Center. In addition to parking lots, other existing uses on the Campus include St. Cement Catholic Church, the St. Clement rectory, and a convent, which is now used to house the Catholic Charities offices (Exhibit 4). The Archdiocese of Los Angeles Education and Welfare Corporation, own the convent and the St. Joseph Center; the Archdiocese of Los Angeles owns all the parking lots, the rectory, and the church.

The two parking lots located in the City of Santa Monica are zoned OP2, which is a medium density residential zone, which allows community centers, churches and "underground parking" as a conditional use, although it would not allow a commercial parking lot that is unrelated to a permitted use. The parking lots are currently developed and used as a parking lot for the uses on the Campus. The owner, the Archdiocese of Los Angeles also leases 58 spaces on the 3007 Second Street lot, the lower lot, to an operator who manages the lot for commercial parking. The current proposal includes reconfiguring the existing parking lots on the property to increase efficiency, reconfiguring and re-landscaping the "lower lot", the lot located on Second and Marine Streets from 58 to 72 spaces; and enlarging an existing lot and driveway adjacent to St. Clement Church (located in Santa Monica) to accommodate 34 spaces, removing one curb cut now located on Marine Street (Santa Monica), and demolishing a ramp that connects the two lots. As part of the related project, A-5-VEN-04-315, the applicant proposes to demolish 23 parking spaces to allow for expansion of the St. Joseph Center and to reconfigure a lot located between St. Joseph Center and Third Street to accommodate 25 spaces. After reconfiguration, the total number of spaces on the Campus will be reduced to 134 spaces, but, the applicant contends, operate more efficiently. The purpose of the reconfiguration is to accommodate the expansion of the St. Joseph Center.<sup>5</sup> As a result of condition imposed by the City of Santa Monica to increase efficiency the previous vehicular link between the parking lots will be removed, but the ramps are connected by walkways and stairway and ramps to the each other the St. Joseph Center and the St. Clement Church will remain.

## **B. Public Access And Recreation**

The project is located three blocks, about a quarter of a mile, inland of Venice Beach and a block and a half (a tenth of a mile) inland of Main Street Santa Monica, a busy restaurant and shopping area. Main Street is two and a half blocks inland of Santa Monica State Beach. The expanded structure will use a parking lot that St. Joseph Center now shares with St. Clement Church and other uses presently located on the St. Clement Campus. Because there has historically been a surplus of parking on the site, the Archdiocese has leased 58 spaces on the lower lot, which is part of the parking that this community center will use, for operation as paid public parking (Crain, April 2003).

The project is located in an area where cumulative parking deficits could reduce public beach parking. In this densely developed area, streets and parking lots two to four blocks

---

<sup>5</sup> At a site visit on December 9, 2004, staff counted 58 marked spaces. A booth occupied one of the spaces, and a second space was occupied by the attendant's car. However two cars were parked at the ends of rows outside marked spaces.

from the beach are occasionally used for beach parking by individuals who wish to avoid the fees at nearby public lots which include: the Rose Avenue lot on Venice Beach (289 spaces), four City of Santa Monica-operated lots west of Main St. and east of Nielsen Way (a total of 330 spaces), and the South Lot at Santa Monica State Beach (871 spaces). Because the Main Street commercial area includes many older storefronts that do not provide their own on-site parking, many visitors to Main Street use either these public lots or the St. Joseph Center lower lot.

Coastal Act Section 30210 provides for maximum access; Section 30211 provides that existing access must be protected; and Section 30252 requires development to provide adequate parking facilities or substitute means of serving the development with public transportation

**Section 30210 Access; recreational opportunities; posting**

In carrying out the requirement of Section 4 of Article X of the California Constitution, maximum access, which shall be conspicuously posted, and recreational opportunities shall be provided for all the people consistent with public safety needs and the need to protect public rights, rights of private property owners, and natural resource areas from overuse. (Amended by Ch. 1075, Stats. 1978.)

**Section 30211 Development not to interfere with access**

Development shall not interfere with the public's right of access to the sea where acquired through use or legislative authorization, including, but not limited to, the use of dry sand and rocky coastal beaches to the first line of terrestrial vegetation.

**Section 30252 Maintenance and enhancement of public access**

The location and amount of new development should maintain and enhance public access to the coast by (1) facilitating the provision or extension of transit service, (2) providing commercial facilities within or adjoining residential development or in other areas that will minimize the use of coastal access roads, (3) providing non-automobile circulation within the development, (4) providing adequate parking facilities or providing substitute means of serving the development with public transportation, (5) assuring the potential for public transit for high intensity uses such as high-rise office buildings, and by (6) assuring that the recreational needs of new residents will not overload nearby coastal recreation areas by correlating the amount of development with local park acquisition and development plans with the provision of onsite recreational facilities to serve the new development.

The related project A5-VEN-04-315 would increase the square footage of the St. Joseph Center from 10,674 square feet to 29,086 square feet. There are currently 136 parking spaces on the Campus to serve the church, the rectory, the St. Joseph Center and Catholic Charities. One hundred thirty-four are spread between surface parking lots; two are located in the rectory garage. The 58 space "lower lot," located in the City of Santa Monica, is operated as a commercial lot. The parking lots do not now appear to be managed for all the services on the Campus. The applicant proposes to reconfigure the on-site parking areas to serve the employees and clients of the expanded center but proposes to reduce the total number of parking spaces. The project will increase parking in the lot at 3007 Second Street to 72 spaces; the St. Joseph Center will expand over 23 parking spaces at the rear of its present building, demolishing those spaces, and the lots

at 3114 Third Street and the Third Street Venice lot will be expanded to 34 and 25 spaces respectively. The Crain & Associates parking study indicated that the total number of parking spaces on the Campus would increase to 146 spaces after the applicant reconfigured all the lots. However Santa Monica required landscaping, which reduced the number of spaces to 141. After internal evaluation, the applicant discovered that its plan for reconfiguration of the Third Street parking lots impacted amenities important to members of the St. Clement Church, which include a shrine to the Virgin of Guadalupe in the Third Street Venice lot and a gazebo and grotto at the rear of the rectory in the lot at 3114 Third Street. As now revised, the applicant indicates that it will have 134 spaces on the Campus after reconfiguration, a number that includes the two spaces in the rectory garage.

**St. Joseph Center/St. Clement Church Parking Summary**

**Existing**

1.	Lower Public Lot 3007 Second Street	58 Spaces
2.	Parking Lot Adjoining St. Joseph Center	23 Spaces
3.	Third Street Venice lot Rear of St. Joseph Center	24 Spaces
4.	Parking Lots Adjoining Rectory and Church: 3114 Third Street	28 Spaces
5.	Rectory Garage	2 Spaces
<b>Total</b>		<b>136 Spaces</b>

**Proposed**

	Lower Public Lot 3007 Second St.	72 Spaces (including 4 drop-off spaces for St. Joseph Center)
	Third Street Venice lot Rear of St. Joseph Center.	25 Spaces (including 6 drop-off spaces for St. Joseph Center)
	Reconfigured Parking Lot Adjoining Rectory and Church: 3114 Third Street.	34 Spaces
	Rectory Garage	2 Spaces
<b>Total</b>		<b>134 Spaces</b>

**Shared Parking.** The applicant has provided a parking study indicating that at the level of use currently proposed, there will be no need for significant additional parking. The two biggest parking generators on the site are the St. Joseph Center and St. Clement Church. The study indicates that the two uses can share parking because the peak demands of St. Clement Church and St. Joseph Center occur at different times. St. Clement Church has a high demand on Sundays and on Friday evenings but not during the week, and the Center is not open on weekends.<sup>6</sup> Catholic Charities is open on Saturday, and generates very little traffic or need for parking during the week (about 8 spaces). The study concludes that the St. Joseph's Center can share parking with the church with no conflict, and there is adequate parking on the Campus to serve both uses.

**Overlapping uses within St. Joseph's Center.** The study goes on to consider the demand of the various uses that are proposed to operate out of the expanded St. Joseph

<sup>6</sup> See Crain & Associates, December 12, 2003 Exhibit 10.

Center and concludes that if the present uses continue, there will be ample parking during working hours, leaving 8 spaces for St. Clement Church, 8 spaces for Catholic Charities and 51 spaces for leasing in the lower lot, 44 spaces adjusted for the reduction shown on Exhibit 66. The conclusion is based on counts of the parking spaces that are normally occupied during the workweek by employees and program participants both on and off the site. The study projects that even with the planned increases in the number of counselors (10) and the enrollment of the nursery school there will be ample parking on the Campus. The study is based on an assumption that many workers will still be at the site on a part-time basis (Exhibit 10). Based on this assumption, and the high use of public transit by employees and program participants, the applicant's study indicates that the demand for parking will be lower than would be expected from a commercial office building of a comparable size.

The applicant's study shows that as projected, there will be 51 surplus spaces on the site even at peak times, 44 spaces adjusted for the reduction shown on Exhibit 66, which it estimates at midday on Tuesdays and Wednesdays, most specifically 2:00 pm on Wednesdays. (Exhibit 10, pp13-16). The study estimates that at peak time, the maximum parking demand for the expanded St. Joseph Center would increase from a maximum 42 spaces to approximately 74 spaces, leaving 53 spaces on the Campus unoccupied, based on the revised lot configuration. This peak demand would occur at 2:00 pm on Wednesdays. The study presumes that about 56 vehicles from the public will park in the 72-space lot at 3007 Second Street, which will have 69 long-term spaces and 4 short-term spaces for drop-off use. At 1:00-2:00 pm Wednesdays about three public users of the pay lot could be displaced.

The study suggests that the low parking demand derives from 1) the staggered work schedules of the professional staff at St. Joseph Center 2) the commuting pattern of some staff and of the program participants of the St. Joseph Center and Catholic Charities, a large percentage of whom use transit, bicycle or walk. (See Exhibit, 10, excerpts from Crain & Associates study) Based on this study, the applicant asserts that any increased parking demand for the new structure can be accommodated and the enlargement of the Center will not have any impacts on beach support parking. The argument is based on an assumption that the church building will continue to be operated as a church and that the community service center will continue to be linked to the church, will serve a local clientele, (or one that uses transit even if they are not local) and will operate consistent with its current pattern of use, with staggered and part-time staff schedules.

The City of Los Angeles approved the project with the parking plan, but required a resurvey after occupancy, and required that only the lower lot could be leased. The City of Los Angeles Zoning Administrator's Determination approving the parking plan concluded that because of the different times of peak demands of the various uses sharing the lot, there would be adequate parking even with the expanded structure. The City approval of the Shared Parking Plan (SPP) includes 1) a review from the City of Los Angeles' Department of Public Works (Exhibit 9) and 2) a Zoning Administrator's Determination approving a Shared Parking Plan (SPP Exhibit 63). In doing so it imposed condition numbers 8 (assessment for changed conditions after occupancy), 11 (hours of operation),

12 (limitations on use/occupancy), 18 (parking/circulation management, including provision of drop-off areas), 33, 34, 35 and 36, operation of shared parking:

8. In order to provide for reexamination in six months (for parking review only) and one year of the matter in light of any changed conditions in the neighborhood or operation of the project and in order to evaluate the effectiveness of and compliance with the conditions of approval regarding the operations and physical improvements of the facility, the applicant/operator or owner shall file for an Approval of Plans. Said application must be filed with the Zoning Administrator no later than six months and one year after the issuance of a certificate of occupancy but not sooner than five months and nine months, respectively, from that time. The application shall be accompanied by the payment of appropriate fees, as governed by Section 19.01-1 of the Los Angeles Municipal Code, and must be accepted as complete by the Planning Department public counter. The completed application shall be accompanied by tenant/owner notice labels for 500-foot radius and include the individuals on the interested parties list related to the subject authorization for the purpose of a public hearing. The applicant/owner shall provide appropriate documentation to substantiate ongoing compliance with each of the conditions contained herein, including a shared parking study in accordance to Section 12.24-X, 20, of the Los Angeles Municipal Code, at the time of filing the Approval of Plans review application. Conditions may be added or modified as appropriate.

#### Shared Parking

33. The applicant and parties operating the shared parking facility shall submit written evidence in a form satisfactory to the Office of Zoning Administration which describes the specific nature of the uses, hours of operation, parking requirements, and the allocation of parking spaces, and which demonstrates that the required parking for each use, including leased parking, will be available taking into account their hours of operation. This information shall be provided for the uses on the entire church site.

34. Reserved or otherwise restricted spaces shall not be shared. No spaces shall be reserved for any particular user, including lease parking spaces. The entire 146<sup>7</sup> parking spaces must be made available to all of the uses, except that leased parking (as set out below) may be confined to the lower parking lot.

35. Leased parking spaces shall be limited to the lower parking lot located along Hampton Drive. Prior to the issuance of a Certificate of Occupancy, a parking operations plan shall be submitted to the Zoning Administrator for review and approval. The parking operations plan shall ensure that the needs of all on-site users are adequately met before making spaces available for public use. The Zoning Administrator may require the recommendation of Department of Transportation prior to approval. A shared parking survey and analysis shall be provided with any plan approval application and shall be reviewed by the Department of Transportation prior to submission.

36. Prior to the issuance of any permits, additional documents, covenants, deed restrictions, or other agreements shall be executed and recorded as may be deemed necessary by the Zoning Administrator, in order to assure the continued maintenance and operation of the shared spaces, under the terms and conditions set forth in the original

---

<sup>7</sup> 146 is the number of spaces prior to review by the City of Santa Monica and internal review by St. Clement Parish and diocesan authorities.

shared parking arrangement. Any changes to the participating uses or hours (includes portions within the City of Santa Monica) shall require a plan approval application and a public hearing. (City of Los Angeles approval APCW 2003-3304-SPE-CU-CDP-ZAD-SPP:)

Since the approval of the Conditional Use Permit (CUP) and Shared Parking Plan (SPP) were reported to the Commission along with the coastal development permit, but are in fact independent of the coastal development permit process, the Commission's assumption of jurisdiction over the underlying coastal development permit did not automatically eliminate the special conditions imposed in these actions. If a local condition is not explicitly superseded by the Commission action, the local government can continue to enforce the conditions adopted as part of the CUP and SPP independent of the Commission. Such conditions include the requirements to hire a security guard, and to adjust hours of construction to reduce conflict with a nearby school. Special Condition 1 of this permit addresses the relationship between the City's actions and the Coastal Development Permit.

Opponents contend that the project will have impacts on public shoreline access because 1) the project provides no on-site parking for the enlarged structure, 2) the parking is on a separate legal lot from the building, that is owned by a different legal entity, so that it is not sufficiently protected in event the building is sold, 3) the shared parking is not presently sufficient for all uses sharing it; 4) the assumption that the offices will not be fully occupied on a normal 8-5 business schedule is wrong; and 5) once there are more offices, workers will work more hours on the site. Opponents further contend that the lower lot is currently leased for parking by beach goers, customers of commercial uses, a nearby religious school and local residents and if the new building occupies more of this parking, the loss of this parking supply may have adverse impacts on coastal access and local businesses. Opponents also argue that the parking study does not take into account parking demand from special events such as weddings and funerals, which are not confined to Sundays. The opponents have provided an alternative schedule of parking lot demand based on different assumptions concerning the amount of use of parking on the part of visitors, program participants and guests. These estimates support the opponent's conclusion that the applicants study and the City's shared parking plan is inaccurate (Exhibits 14 and 15).

The applicant is planning to decrease the parking supply by two spaces but asserts that with better management, more spaces will be available when necessary. The 58-space lot at 3007 Second Street and both Third Street lots are owned by the Archdiocese of Los Angeles, which is a different entity from the Archdiocese of Los Angeles Education and Welfare Corporation, the entity that owns the St. Joseph Center and the convent. In support of the third contention, the opponents argue that program participants and St. Joseph staff now park on the streets surrounding the facility; the lower lot is full when employees arrive at work, and many program participants park in the streets surrounding the facility. Therefore, they argue, parking counts that confine themselves to the on-site lots understate the current demand. In response, the applicant points out that the parking study surveyed all employees and attempted to count parking use on neighboring streets. The applicant agrees that the lower lot is leased and operated as a public commercial lot, but contends that the parking study supports its view that the leasing can continue. However the City-approved Shared Parking Plan requires the applicant to demonstrate

that the parking needs of the enlarged center are accommodated after occupancy (See conditions 8 and 35 above.) With respect to special events, the applicant indicates that the City CUP specifically limits the number of after-hours special events that can take place (Conditions 11 and 12 CUP, Exhibit 63.) The Commission notes, however, that the St. Clement Church, with its schedule of weddings and funerals, is not part of this application that the church was constructed in 1950, and has presumably been holding weddings and funerals since that year.

The Commission has approved shared parking plans, including in Venice, Santa Monica and Marina del Rey, for major developments such as hotels, clubs and golf courses that offer a number of functions on the same site, for businesses in older smaller structures that share one or several central parking facilities, such as the walk up establishments on Venice Beach<sup>8</sup>. In all instances, the Commission based its approval on studies of the demands of the proposed uses on site. The major criterion to approve such a plan has been whether the applicant could demonstrate that the peak attendance of each use sharing the parking occurred at different times, and that there be no significant adverse impacts to coastal access. In this case, the two biggest traffic generators on the site, the church and the service center, operate at different times -- the church offers Sunday and Friday night Mass; the St. Joseph Center operates from 8:00 AM to 5:PM on weekdays.

The second question raised by the opponents is whether, if the building were sold for another use, is there enough parking on the site to accommodate the parking generated by the new structure on its own. The result of the applicant's calculations is that even if the use of the structure changed to a commercial office, there would be enough parking on the existing Campus, although there would not be a surplus to lease for a commercial lot. Such calculations depend on the church remaining a church, on the new structure operating at different hours from the church, and on all spaces on the Campus being available for the use of the owner of the proposed structure. The applicant's consultant indicates that based on a cumulative count of the zoning standard for each use proposed in the new structure and the square footage proposed for each use, the combined demand for parking for all the weekday uses proposed on the site is 122 spaces (Exhibit 10). If the uses were to change from the proposed pattern including a part time staggered schedule, a permit amendment would be necessary to assess the parking demand.

Staff also calculated the parking demands of the new structure in several ways. The result of all calculations was that there is enough parking on the Campus to accommodate the new structure even if the low auto use that the consultant found there does not prevail. The Commission notes that by some calculations at least part of the 3007 Second Street would have to be reserved for program participants and employees of the center, or the operations of the new center would need to be revised. All calculations assumed that the present church would not require significant parking during the week.

Second floor counseling offices 1/250 sq ft gross	42.5	53.5				
Garage and storage	1	1				

The opponents are correct in concluding that the applicability of the study in the future depends on the type of use and the hours of operation and the continued travel patterns of the program participants. They are also correct in indicating that the lower lot could be sold separately because the 17 lots on the Campus are previously subdivided lots. However, the Commission has imposed a special condition that ties the parking spaces on this project to this project, regardless of who will own the lot. (See Special Conditions 3 and 4.) Therefore the Commission has required in Special Condition 2 that the applicant demonstrate that the operators of each facility on the church Campus have the right to use all the spaces, in Special Condition 3 that the applicant monitor the uses of parking on the Campus, and in Special Condition 4 that the applicant(s)/ owners develop a shared parking plan for all uses and all parking lots on the entire Campus to manage the uses on their site consistent with available parking on the entire Campus. The City's conditions impose similar requirements. Finally, the Commission requires that the applicant to record a deed restriction over all lots on the church Campus memorializing these conditions that will be in force as long as the reconfigured parking lots and the St. Joseph's Center remain. Further, in order to assure that parking demand remains consistent with that provided to the Commission in this action, the Commission has imposed a special condition requiring that any change in use or increase in size of any of the structures on the Campus would require an amendment to the CDP (or a new permit under as development defined in Section 30106 of the Coastal Act.) Furthermore, the Executive Director could not accept such an amendment if it were inconsistent with the Commission's intent in approving the underlying permit, which is to accommodate all parking generated by the six parcels on the site.

Because the surplus is based in part on the current level of staffing, and staggered and part-time work schedules, submitted to the City of Los Angeles in the parking study, the Commission has required any proposed change to the CUP or SPP must be reported to the Executive Director to determine whether such changes can be considered a change that triggers an amendment to this permit. The Commission finds that as conditioned the development as conditioned will not impact public parking or existing public beach access and is consistent with the public access policies of the Coastal Act.

### **C. Scenic and Visual Qualities – Neighborhood Character**

The Coastal Act requires development to protect visual resources, community character and special communities. In order to protect community character in Venice, and Santa Monica, the Commission has limited the height and scale of structures and required buffering of parking lots. The City of Santa Monica Architecture Review Board addressed the visual impacts of these parking lots, requiring measures to reduce the blighting effect of a nine foot high vertical fence and wall along Second Street (Exhibit 8 page 6), to protect some existing trees, install new trees and other landscaping and control light and glare from parking lot lighting.

Section 30251 of the Coastal Act states:

The scenic and visual qualities of coastal areas shall be considered and protected as a resource of public importance. Permitted development shall be sited and designed to protect views to and along the ocean and scenic coastal areas, to minimize the alteration of natural land forms, to be visually compatible with the character of surrounding areas, and, where feasible, to restore and enhance visual quality in visually degraded areas. New development in highly scenic areas such as those designated in the California Coastline Preservation and Recreation Plan prepared by the Department of Parks and Recreation and by local government shall be subordinate to the character of its setting.

Section 30253 of the Coastal Act states in part:

New development shall: ...

(5) Where appropriate, protect special communities and neighborhoods, which, because of their unique characteristics, are popular visitor destination points for recreational uses.

The project will not be visible from the beach and is not located in a public view corridor. However, based on Section 30253, the Commission has required development in Venice and Santa Monica to modify designs to be consistent with community character. In the case of parking lots, the Commission has required parking lots to use landscaping and use other methods to improve their appearance. In this case the City of Santa Monica Architecture Review Board has required the applicant to preserve existing trees, plant new trees, build a multilevel wall around the parking lot instead of one vertical wall, plant vines on the wall and install other landscaping. The applicant has redesigned the parking lot at 3114 Third Street to protect visual amenities, a grotto and a gazebo. As now proposed, the views of the parking lot will be masked from the street and from public areas, and existing trees and amenities will be protected. As redesigned the proposed project is consistent with the requirements of Sections 30251 and 30253 of the coastal Act.

#### **D. Safety and Stability of Development**

The site is located at the southern end of the Santa Monica dunes, low hills that extend from a few blocks east of Main Street to Seventh Street, from just north of Rose Avenue to Pico Boulevard.

Coastal Act Section 30253 states, in part:

##### **Section 30253 Minimization of adverse impacts**

New development shall:

(1) Minimize risks to life and property in areas of high geologic, flood, and fire hazard.

(2) Assure stability and structural integrity, and neither create nor contribute significantly to erosion, geologic instability, or destruction of the site or surrounding area or

in any way require the construction of protective devices that would substantially alter natural landforms along bluffs and cliffs.

The applicant has submitted a preliminary geotechnical investigation that indicates that the site is suitable for development. Borings show that the existing structure is constructed on 2-4 foot thick fill pad supported by a basement and retaining wall. The fill appears to be placed on and cut into a slope that rises about 30 feet between Hampton Drive and Third Street. The fill is placed on "alluvial material" (sand and silty sand). The water table is twenty-five feet below the present surface. The preliminary geotechnical investigation indicates that the applicant will have to overexcavate the site and recompact the soils about 4.5 feet below the foundation areas as part of site preparation. Construction will entail removing old fill within and adjacent to the foot prints of the proposed structures, removing all existing foundations, asphalt, uncertified fill material roots, plants, trees and other vegetation from the site. After this work is done, the retaining wall would be replaced with a new wall engineered to current standards:

Site Preparation: As part of demolition operations, all foundations, floor slabs and underground utilities associated with the existing development should be removed in their entirety. The existing asphaltic concrete pavements should be demolished and removed from the site, or pulverized to a maximum 2-inch particle size for later use as structural fill. The soil-exposed area in the western region of the site is covered by a thin layer of topsoil/root material and sparse vegetation. These materials should be stripped and disposed of off-site or in non-structural areas of the property. Undocumented fill and possible fill soils were encountered at most of the boring locations, extending to depths of 2 to 4 feet.

The City of Los Angeles does not allow the foundations and floor slabs of new structures to be supported on undocumented fill soils. Remedial grading should be performed within the proposed building areas, to remove all existing fill soils. The character of the possible fill soils encountered at the boring locations should be evaluated at this time; if they are determined to represent undocumented fill, they should also be removed in their entirety.

In accordance with City of Los Angeles requirements, additional remedial grading should be performed within each of the building areas to provide for a new layer of compacted structural fill, extending to a depth of at least 3 feet below the deepest foundation element, throughout each individual building. Following evaluation of the overexcavated subgrades by the geotechnical engineer, the exposed subgrade soils should be scarified, moisture-conditioned as necessary, and recompact. (Mitchell and Seminara, 2002)

Other than the need to remove unsuitable material before pouring foundations, the report does not anticipate any further problems with the site. Further calculations submitted by the applicant estimate that it will excavate 4 feet below the foundations and remove the asphalt from the parking lots, which is cracked. The applicant's consultants estimate that they will remove up to 1,500 cubic yards of earth and truck in up to 800 yards of fill, depending on the suitability of the soils actually found on the site. They estimate the quantity of asphalt to be removed at 280 cubic yards. The applicant proposes to confine all staging and stockpiling to the construction site. Special Condition 8 requires the applicant to provide final grading and staging plans and Special Condition 10 requires the

applicant to provide the final geotechnical reports before the permit issues and to build in conformity with their requirements. If the final reports are not consistent with the preliminary reports, the matter will be reported to the Commission as an amendment. As conditioned, the proposed development is consistent with Section 30253.

## **E. Marine Resources and Water Quality**

The standard of review for development proposed in and adjacent to coastal waters is the Chapter 3 policies of the Coastal Act, including the following water quality policies. Sections 30230, 30231 and 30232 of the Coastal Act require the protection of biological productivity, public recreation, and marine resources.

Section 30230 of the Coastal Act states, in pertinent part:

Marine resources shall be maintained, enhanced, and where feasible, restored.

Section 30231 of the Coastal Act states:

The biological productivity and the quality of coastal waters, streams, wetlands, estuaries, and lakes appropriate to maintain optimum populations of marine organisms and for the protection of human health shall be maintained and, where feasible, restored through, among other means, minimizing adverse effects of waste water discharges and entrainment, controlling runoff, preventing depletion of ground water supplies and substantial interference with surface water flow, encouraging waste water reclamation, maintaining natural vegetation buffer areas that protect riparian habitats, and minimizing alteration of natural streams.

Section 30232 of the Coastal Act states, in pertinent part:

Protection against the spillage of crude oil, gas, petroleum products, or hazardous substances shall be provided in relation to any development or transportation of such materials.

### **1. Construction Impacts to Water Quality**

Storage or placement of construction materials, debris, or waste in a location subject to erosion and dispersion or which may be discharged into coastal water via rain, or wind would result in adverse impacts upon the marine environment that would reduce the biological productivity of coastal waters. For instance, construction or demolition debris entering coastal waters may cover and displace soft bottom habitat. Sediment discharged into coastal waters may cause turbidity, which can shade and reduce the productivity of foraging avian and marine species' ability to see food in the water column. Best Management Practices will be implemented to ensure that secondary construction-related impacts to biological resources are minimized during construction. Soil erosion can occur naturally, and may be accelerated during grading and construction when the

area cover is removed and bare soil is disturbed. Demolition can release dust and fibers, which can filter into coastal waters. In order to reduce these impacts the Commission has imposed special conditions to reduce water quality impacts both during and after construction. Therefore the Commission requires the applicant to provide a plan for management of runoff during construction to assure that construction runoff and storm water run-off is filtered prior to leaving the site. Special Condition No. 5 requires submittal of a Final Runoff and Erosion Control Plan for the review and approval of the Executive Director, and following the approved plan during and after construction. The Commission finds the proposed project, as conditioned, is consistent with Sections 30230, 30231 and 30232 of the Coastal Act.

## **2. Post Construction Impacts to Water Quality**

The proposed development would result in the discharge of storm water into the Pacific Ocean via the storm drain resulting in urban runoff entering Santa Monica Bay. Pollutants such as sediments or toxic substances, such as grease, motor oil, heavy metals, hydrocarbons, pesticides and fertilizers are often contained within urban runoff entering the Bay. In this case, the site drains new buildings; two parking lots totaling 132 spaces, a two-car garage, walkways, landscaped areas, roof areas, and a food preparation area. It serves people, who bring with them trash and litter. In order to reduce pests in food preparation areas, pesticides will be used. Therefore, the primary post-construction water quality concerns associated with the proposed project include sediments, trash and debris, grease, motor oil, heavy metals, hydrocarbons, pesticides and fertilizers. Complaints from the public indicated concern with waste and litter on nearby streets that were blamed on the operations of the center and the behavior of some program participants.

### **Drainage from the parking areas.**

In order to deal with these post construction water quality impacts of the parking lot, the applicant has submitted a Runoff Control Plan for the parking lot prepared by their project engineer. Contaminants such as oil and grease, fertilizers, pesticides, and other toxic chemicals typically accumulate on ground surfaces and are then washed into storm drains and waterways by irrigation or rainfall. In order to reduce the level of contaminants leaving the property, the project has been designed to include a stormwater detention basin and water filtration system. In order to protect water quality impacts associated with parking lot runoff, the BMPs implemented must be designed specifically to minimize and/or treat these pollutants. Special Condition 6 requires the submittal of a final Water Quality Management Plan.

The City of Los Angeles CUP addressed complaints of waste and litter on nearby streets from program participants. Condition 15 of the Conditional Use Permit requires the applicant to remove litter and waste from nearby streets once a day when the center is open. The City of Santa Monica required run-off filtration to be incorporated into the design of the two parking lots within its jurisdiction. The Commission imposes a similar

requirement to assure that materials dropped in gutters and on sidewalk do not pollute nearby beaches or ocean waters.

Special Conditions 6 and 7 require measures to reduce long-term adverse effects on water quality from the development and operation of the center and its parking lots. Currently, there is no filtration or treatment of runoff from the site. If the applicant conforms to the requirements of the special conditions, the proposed system will discharge lower volumes of less toxic waters to the ocean than it does now. In order to ensure that water quality is adequately protected, Special Condition No. 6 has been imposed, which requires submittal and implementation of a Final Water Quality Management Plan. As conditioned, the proposed project will be consistent with Sections 30230, 30231 and 30232 of the Coastal Act.

### **G. Prejudice to the Preparation of a Local Coastal program**

Section 30604 (a) of the Coastal Act states that:

Prior to certification of the Local Coastal Program, a Coastal Development Permit shall be issued if the issuing agency, or the Commission on appeal, finds that the proposed development is in conformity with the provisions of Chapter 3 (commencing with Section 30200) of this division and that the permitted development will not prejudice the ability of the local government to prepare a local coastal program that is in conformity with the provisions of Chapter 3 (commencing with Section 30200).

In August 1992, the Commission certified, with suggested modifications, the land use plan portion of the City of Santa Monica's Local Coastal Program, excluding the area west of Ocean Avenue and Neilson Way (Beach Overlay District), the Santa Monica Pier and the Civic Center. On September 15, 1992, the City of Santa Monica accepted the LUP with suggested modifications.

The lots subject to the present application are designated multi-family residential in the certified Land Use Plan even though the church and its ancillary schools and charitable institutions have long occupied them. The City of Santa Monica Zoning Ordinance allows churches and their ancillary structures to occupy residential land as a conditional use. This church has been in this location since the 1950. Therefore the City of Santa Monica did not consider repaving the parking lot as an issue of land use, but as an issue of design, and an opportunity to impose landscaping, design, water quality standards on the rebuilt parking lots, which it does when appropriate on new construction.

This approval is consistent with the policies and land uses in the certified Land Use Plan. As conditioned, the project will not adversely impact coastal resources and beach access. The Commission, therefore, finds that the proposed project will be consistent with the Chapter 3 policies of the Coastal Act and will not prejudice the ability of the City to prepare a Local Coastal Program consistent with the policies of Chapter 3 of the Coastal Act as required by Section 30604(a).

## **H. California Environmental Quality Act**

Section 13096 of the Commission's regulations requires Commission approval of Coastal Development Permit applications to be supported by a finding showing the application, as conditioned by any conditions of approval, to be consistent with any applicable requirements of the California Environmental Quality Act (CEQA). Section 21080.5(d)(2)(A) of CEQA prohibits a proposed development from being approved if there are feasible alternatives or feasible mitigation measures available which would substantially lessen any significant adverse effect which the activity may have on the environment.

Project opponents have proposed alternatives at the City of Los Angeles that in their view would improve the availability of parking. There was no opposition at the City of Santa Monica to the reconfiguration of the parking lots because the issues are all with the management of the parking and the provision of parking by the new structure proposed in Los Angeles.

The major alternative that would affect Santa Monica is the opponents' proposal to excavate the hill under the new St. Joseph's Center to construct a one- or two-level underground parking lot; constructing the structure above this lot, thus providing parking for the structure. While applicant agrees that the existing fill needs to be removed and the retaining wall that parallels Hampton Drive would most likely be deepened and replaced, the applicant argues that replacing a retaining wall is far less expensive than excavating a one or two level underground garage, and constructing a two-story facility above it. Finally, at the City of Los Angeles, the applicant argued successfully that this construction is not feasible and necessary for the to accommodate the uses now proposed in this structure because the parking for the proposed uses can be accommodated within the existing lots.

There are no other feasible alternatives or mitigation measures available, which will lessen any significant adverse impact that the activity would have on the environment. Therefore, the Commission finds that the proposed project is consistent with CEQA and the policies of the Coastal Act.
