¹ Included as Re-establishment in the On-site Revegetation Plan as a result of removal of 420 feet of the existing railroad berm resulting in a longer bridge.

² Establishment to ensure no net loss of jurisdictional area requires 0.68 acres at W-19 to cover the difference between onsite establishment and permanent loss.

³ Mitigation for long-term temporary impacts is provided at a ratio of 1:1. As the W-19 Restoration Project progresses toward meeting success criteria in advance of project impacts, it is proposed that a 10 percentage points reduction would occur in the long-term temporary mitigation for each year that success criteria is met in advance of project impacts.

⁴ 0.14 acre of open water will be rehabilitated to wetland habitat per the On-site Revegetation Plan.

⁵ Most of this area is included as rehabilitation of wetlands in the On-site Revegetation Plan. Temporary impacts to unvegetated resources will be returned to their original contours after construction and don't require revegetation.

⁶ Temporary impacts include both short-term temporary and permanent fill/temporary impact (buried rock).
